### Scientific Inquiry Cycle: Review

Science based on the scientific method for solving problems and investigating theories. When faced with a new problem, such as a new species or a new element, using research to discover or investigate solutions can help a scientist inquire, understanding the problem fully, including its causes and effects, in the form of a flowchart or flow diagram.

Designing, conducting, and interpreting various experiments, such as design, time and space, allows a scientist to understand, investigating this part of a scientist might cause, characterize, measure, and/or control to help others understand. For example, studying research for a cause that may affect its cost and pace of use, which influences the effectiveness of the solution.

After investigating a problem, investigating their results, what constitutes physical & social environment, allows a scientist to make possible mistakes or new ideas. Communication, sharing findings results, and reflecting on the impact of their findings are possible areas. This process can help a scientist fully understand scientific research findings and how communication works.

#### 10. Mark the best answer for each question.

- What is the first important step when designing a new science experiment?
- Designing a solution immediately
- Ignoring the new problem
- Observing existing conditions
- Understanding the problem fully

  

- What does investigating a problem help with?
- Ignoring the problem on the scientist
- Understanding the problem and reality
- Ignoring how to solve
- Understanding the problem fully

  

- What is an example of a problem?
- Building a house
- Learning a new skill
- The first meeting and
- Using unsafe equipment

  

- Why is it important to ignore a problem?
- It's often not useful
