

Remember that the Agilent E3631A Triple Output DC Power Supply has 6V, 25V, and -25V outputs. Because the positive and negative sources are independent, a common ground is necessary to ensure that there are no “floating” reference points in the circuit. If the negative sides of the voltage sources are grounded in your schematic, they need to be tied together to the same ground in lab. To do this, simply wire the common (black) terminal from each side together to the green earth ground terminal in the middle as shown below in **Figure 3**.
