Naglieri, 2009-06-15 Impairment and disability are widely used terms yet considerable disagreement exists as to their relationship especially when impairment means different things to different professionals in the fields of mental health medicine and education Although diagnostic criteria for various disorders are clearly detailed in the DSM IV and

elsewhere criteria for impairment remain elusive And patients with severe limitations but minimal symptoms or the reverse further complicate the discussion The first in depth treatment of the theory definition and evaluation of this core concept Assessing Impairment From Theory to Practice cuts through the confusion and cross talk Leading scholars and clinicians offer a robust evidence base for a much needed reconceptualization of impairment within the context of diagnosis and disability arguing for a wide ranging quality of life perspective This contextual approach to assessment goes beyond mere symptom counting resulting in more accurate diagnosis targeted interventions and improved patient functioning Within this concise but comprehensive volume coverage focuses on key areas including Current conceptualizations from the DSM IV and other medical models Methodologies for measuring symptom severity and impairment Social behavioral issues such as resilience adaptive behaviors and family environment Developmental issues across the life span Legal and ethical questions and civil rights issues Impairment and disability as they relate to trauma The interdisciplinary model proposed in Assessing Impairment gives clinicians vital tools for working with the unique limitations and strengths of every patient Child school and educational psychologists will find it particularly useful given the critical importance of early detection and the complexity of young people s lives **CompScope Benchmarks** ,2004 *Professional Voice, Fourth Edition* Robert Thayer
