*Interface and Transport Dynamics* Heike Emmerich, Britta Nestler, Michael Schreckenberg, 2003-09-03 An overview of the recent progress of research in computational physics and materials science Particular topics are modelling of traffic flow and complex multi scale solidification phenomena The sections introduce novel research results of experts from a considerable diversity of disciplines such as physics mathematical and computational modelling nonlinear dynamics materials sciences statistical mechanics and foundry technique The book intends to create a comprehensive and coherent image of the current research status and illustrates new simulation results of transport and interface dynamics by high resolution graphics Various possible perspectives are formulated for future activities Special emphasis is laid on exchanging experiences concerning numerical tools and on the bridging of the scales as is necessary in a variety of scientific and engineering applications An interesting possibility along this line was the coupling of different computational approaches leading to hybrid simulations

**Interface and Transport Dynamics** Heike Emmerich, Britta Nestler, Michael Schreckenberg, 2014-03-12 An overview of the recent progress of research in computational physics and materials science Particular topics are modelling of traffic flow and complex multi scale solidification phenomena The sections introduce novel research results of experts from a considerable diversity of disciplines such as physics mathematical and computational modelling nonlinear dynamics materials sciences statistical mechanics and foundry technique The book intends to create a comprehensive and coherent image of the current research status and illustrates new simulation results of transport and interface dynamics by high resolution graphics Various possible perspectives are formulated for future activities Special emphasis is laid on exchanging experiences concerning numerical tools and on the bridging of the scales as is necessary in a variety of scientific and engineering applications An interesting possibility along this line was the coupling of different computational approaches leading to hybrid simulations

Multiscale Modelling and Simulation Sabine Attiger, Petros Koumoutsakos, 2012-12-06 In August 2003 ETHZ Computational Laboratory CoLab together with the Swiss Center for Scientific Computing in Manno and the Universit della Svizzera Italiana USI organized the Summer School in Multiscale Modelling and Simulation in Lugano Switzerland This summer school brought together experts in different disciplines to exchange ideas on how to link methodologies on different scales Relevant examples of practical interest include structural analysis of materials flow through porous media turbulent transport in high Reynolds number flows large scale molecular dynamic simulations ab initio physics and chemistry and a multitude of others Though multiple scale models are not new the topic has recently taken on a new sense of urgency A number of hybrid approaches are now created in which ideas coming from distinct disciplines or modelling approaches are unified to produce new and computationally efficient techniques

*Automatic Differentiation: Applications, Theory, and Implementations* H. Martin Bücker, George Corliss, Paul Hovland, Uwe Naumann, Boyana Norris, 2006-02-03 Covers the state of the art in automatic differentiation theory and practice
