

Points to note re. use of Ballard/Westwood Timed Arithmetic² Test:

General:

- Like all tests, it has its pros and cons. It gives a useful snap-shot of a child's reflexive knowledge of basic tables facts.
- It is timed, some children do not work well under pressure of time. A low score does not always indicate a high % of incorrect answers, but could be simply incomplete.
- Child may actually know the answers but is slow at recording.
- Does not measure potential but can help identify weaknesses and assess progress. Can also indicate readiness for various algorithms, e.g. long division.
- If it is not rendered useless by being used as the basis for a regular Friday tables test, it is quite reliable and efficient.
- Children usually want to know their score and how it compares to the end-yr target. (often this is more important to them than comparing their score with other pupils)
- History of the test: a bit hazy!! Ballard (7) devised and named the Add/Sub. Vernon revised the norms in 1969. Lester Westwood devised the MultiDiv and both the add/sub & multiDiv were renamed by him *et al* (1974) in England and by Broughton (1975) in Australia.
- The end-yr targets have not been standardised but seem to be quite realistic and achievable (schools could decide their own targets). These targets were set by teachers in a mixed infants to 6th grade pupil school, school setting, neither disadvantaged or privileged. Westwood did supply mean and critically low scores for various ages, these are perhaps useful but only as a rough guide as they were standardised quite some time ago.
- By testing at Easter, the final tests could be used by children to put in a final push (and also perhaps to alert parents).
- A certificate to signify reaching the End-yr Tables Target could be designed & given out.
- It might be worthwhile to administer the copying test to see if motor/hand-eye co-ordination is a factor re low scores??
