Heterogeneous System Architecture Wen-mei W. Hwu, 2015-11-20 Heterogeneous Systems Architecture a new compute platform infrastructure presents a next generation hardware platform and associated software that allows processors of different types to work efficiently and cooperatively in shared memory from a single source program. HSA also defines a virtual ISA for parallel routines or kernels which is vendor and ISA independent thus enabling single source programs to execute across any HSA compliant heterogeneous processor from those used in smartphones to supercomputers. The book begins with an overview of the evolution of heterogeneous parallel processing associated problems and how they are overcome with HSA. Later chapters provide a deeper perspective on topics such as the runtime memory model, queuing context switching, the architected queuing language, simulators and tool chains. Finally three real world examples are presented which provide an early demonstration of how HSA can deliver significantly higher performance thru C based applications. Contributing authors are HSA Foundation members who are experts from both academia and industry. Some of these distinguished authors are listed here in alphabetical order: Yeh, Ching, Chung, Benedict, R, Gaster, Juan, Gmez, Luna, Derek, Hower, Lee, Howes, Shih, Hao, Hung, Thomas, B, Jablin, David, Kaeli, Phil, Rogers, Ben, Sander, I, Jui, Ray, Sung. Provides clear and concise explanations of key HSA concepts and fundamentals by expert HSA Specification contributors. Explains how

performance bound programming algorithms and application types can be significantly optimized by utilizing HSA hardware and software features Presents HSA simply clearly and concisely without reading the detailed HSA Specification documents Demonstrates ideal mapping of processing resources from CPUs to many other heterogeneous processors that comply with HSA Specifications
