Donald G. Newnan

Roadside Design Guide:

Roadside Design Guide American Association of State Highway and Transportation Officials. Task Force for Roadside Safety, 2011 The Roadside Design Guide presents a synthesis of current information and operating practices related to roadside safety and is written in dual units metric and U S Customary This book is a guide It is not a standard nor is it a design policy It is intended to use as a resource document from which individual highway agencies can develop standards and policies Although much of the material in the guide can be considered universal in its application several recommendations are subjective in nature and may need modification to fit local conditions However it is important that significant deviations from the guide be based on operational experience and objective analysis The 2011 edition of the AASHTO Roadside Design Guide has been updated to include hardware that has met the evaluation criteria contained in the National Cooperative Highway Research Program NCHRP Report 350 Recommended Procedures for the Safety Performance Evaluation of Highway Features and begins to detail the most current evaluation criteria contained under the Manual for Assessing Safety Hardware 2009 MASH For the most part roadside hardware tested and accepted under older guidelines that are no longer applicable has not been excluded in this edition AASHTO website A Guide for Achieving Flexibility in Highway Design, 2004 Context sensitive solutions CSS reflect the need to consider highway projects as more than just transportation facilities Depending on how highway projects are integrated into the community they can have far reaching impacts beyond their traffic or transportation function CSS is a comprehensive process that brings stakeholders together in a positive proactive environment to develop projects that not only meet transportation needs but also improve or enhance the community Achieving a flexible context sensitive design solution requires designers to fully understand the reasons behind the processes design values and design procedures that are used This AASHTO Guide shows highway designers how to think flexibly how to recognize the many choices and options they have and how to arrive at the best solution for the particular situation or context It also strives to emphasize that flexible design does not necessarily entail a fundamentally new design process but that it can be integrated into the existing transportation culture This publication represents a major step toward institutionalizing CSS into state transportation departments and other agencies charged with transportation project development Roadside Design Guide, 2011 Supplement to Austroads Guide to Road Design. Part 6: Roadside Design. Safety and Barriers, 2014 **Roadside design guide**, 1989 ROADSIDE Design Guide, 2002 **Development of Safety Performance-based Guidelines for the Roadside Design Guide** Malcolm H. Ray, Christine E. Carrigan, Ethan M. Ray, 2022 In 1960 it was observed that approximately 30% to 35% of highway fatalities occur in runoff road collisions a statistic that has remained remarkably constant through the present day The TRB National Cooperative Highway Research Program s NCHRP Research Report 972 Development of Safety Performance Based Guidelines for the Roadside Design Guide provides quantitative safety performance guidance rather than implicit guidance which will more effectively

communicate design objectives and performance goals and quantify improvements to safety This change is complementary to the performance based practical design approach being promoted by the U S Federal Highway Administration as well as the ongoing efforts to add performance based design measures to the geometric design process as documented in NCHRP Report 785 Performance Based Analysis of Geometric Design of Highways and Streets Supplemental to the report are four appendices Appendix A Roadside Risk Workbook Appendix B Derivations Appendix C Serious and Fatal Injury Crash Tables and Appendix D Research Needs and Knowledge Gaps

Roadway Lighting Design Guide American Association of State Highway and Transportation Officials,2005 This guide replaces the 1984 publication entitled An Informational Guide for Roadway Lighting It has been revised and brought up to date to reflect current practices in roadway lighting The guide provides a general overview of lighting systems from the point of view of the transportation departments and recommends minimum levels of quality The guide incorporates the illuminance and luminance design methods but does not include the small target visibility STV method

Federal Register ,1987 Guide to Road Design ,2009 Highway/utility Guide ,1993 For many years there has been a need to assemble under one cover state of the knowledge guidance on the better practices begin employed to address the full array of issues which can arise from highway and utility facilities having common right of way The Highway Utility Guide is such a document It provides useful information relevant to joint use issues a historical perspective and good current practices Issues addressed in the Highway Utility Guide include planning and coordination design permits information management and mapping notification procedures legal safety construction maintenance reimbursement and others

Human Factors Guidelines for Road Systems John L. Campbell,Christian M. Richard,Jerry L. Graham,National Cooperative Highway Research Program,2008 NCHRP report 600 explores human factors principles and findings for consideration by highway designers and traffic engineers The report is designed to help the nonexpert in human factors to
