web voiceover let's get some practice solving some exponential equations and we have one right over here we have 2^x to the $9x$ plus five power equals one so pause the video and see if you can tell me what x is going to be well the key here is to realize that 2^0 to the zeroth power to the zeroth power is equal to one

other words if you can express the exponential equations to have the same base on both sides then it is okay to set their powers or exponents equal to each other

solving exponential equations using logarithms khan academy - Sep 04 2022

the key to solving exponential equations lies in logarithms let's take a closer look by working through some examples solving exponential equations of the form $a^b x^d$ let's solve $5^2 x^240$ to solve for x we must first isolate the exponential part to do this divide both sides by 5 as shown below
