**Monotonic and Ultra-Low-Cycle Fatigue Behaviour of Pipeline Steels** António Augusto Fernandes, Abílio M.P. de Jesus, Renato Natal Jorge, 2018-06-15 This book covers the development of innovative computational methodologies for the simulation of steel material fracture under both monotonic and ultra low cycle fatigue. The main aspects are summarised as follows i Database of small and full scale testing data covering the X52 X60 X65 X70 and X80 piping steel grades. Monotonic and ULCF tests of pipe components were performed buckled and dented pipes, elbows and straight pipes. ii New constitutive models for both monotonic and ULCF loading are proposed. Besides the Barcelona model, alternative approaches are presented such as the combined Bai Wierzbicki Ohata Toyoda model. iii Developed constitutive models are calibrated and validated using experimentally derived testing data. Guidelines for damage simulation are included. The book could be seen as a comprehensive repository of experimental results and numerical modeling on advanced methods dealing with Ultra Low Cycle Fatigue of Pipelines when subjected to high strain loading conditions.

**High Performance and Optimum Design of Structures and Materials II** S. Hernández, C.A. Brebbia, W.P. De Wilde, 2016-11-28 Containing papers from the 2nd High Performance Design of Structures and Materials and the Optimum Design of Structures conference following the success of a number of meetings since 1989 this book will be of interest to those in any engineering field. The use of novel materials and new structural concepts nowadays is not restricted to highly technical areas like aerospace/aeronautical applications or the automotive industry but affects all engineering fields including those such as civil engineering and architecture. Most high performance structures require the development of a generation of new higher performance sustainable materials which can more easily resist a range of external stimuli or react in a non conventional manner. Emphasis is placed on intelligent structures and materials as well as the application of computational methods for their modelling, control and management. Optimisation problems of interest involve those related to size, shape and topology of structures and materials. Optimisation techniques have much to offer to those involved in the design of new industrial products. The development of new algorithms and the appearance of powerful commercial computer codes with easy to use graphical interfaces have created a fertile field for the incorporation of optimisation into the design process in all engineering disciplines. The book addresses the topic of design optimisation with welcomed contributions on numerical methods, different optimisation techniques and new software. Several of the topics covered are Composite materials and structures, Material characterisation, Experiments and numerical analysis, Transformable structures, Environmentally friendly and sustainable structures, Evolutionary methods in optimisation, Aerospace structures, Biomechanics application and Pneumatic structures.
