and key members of his team decided to seek asylum in the United States when the war ended. Now the country took up the engineering of rockets in earnest. Von Braun went on to lead the American space program during the crucial decades of the 1950s and 1960s. He did more to advance missiles, rockets, spaceflight and enable manned landings on the moon than anybody else in America. Six astronauts flew solo on six Project Mercury flights 1961-1963. Three of them joined another 13 astronauts to orbit Earth on 10 two-person Project Gemini flights 1965-1966. Without a single failure. The Soviet Union captured their fair share of German rocketeers including the influential Helmut Grttrup. They learned everything possible from the German expatriates. Then they cast the Germans aside and undertook rocket and missile development using indigenous experts like Sergei Korolyov and Valentin Glushko. Like von Braun, Korolyov was ingenious in his own right and led the development of Soviet rocket science until his untimely death in January 1966. Engineers and scientists are today's unsung heroes. They work in the shadows without any public acclaim or recognition yet the technologies they develop touch every facet of our daily lives.
