Classical and Quantum Information Dan C. Marinescu, 2011-01-07 A new discipline Quantum Information Science has emerged in the last two decades of the twentieth century at the intersection of Physics Mathematics and Computer Science Quantum Information Processing is an application of Quantum Information Science which covers the transformation storage and transmission of quantum information it represents a revolutionary approach to information processing Classical and Quantum Information covers topics in quantum computing quantum information theory and quantum error correction three important areas of quantum information processing Quantum information theory and quantum error correction build on the scope concepts methodology and techniques developed in the context of their close relatives classical information theory and classical error correcting codes Presents recent results in quantum computing quantum information theory and quantum error correcting codes Covers both classical and quantum information theory and error correcting codes The last chapter of the book covers physical implementation of quantum information processing devices Covers the mathematical formalism and the concepts in Quantum Mechanics critical for understanding the properties and the transformations of quantum information **Fleet Owner**, 1997 **Beyond Engineering** Robert Pool, 1997-07-17 We have long recognized technology as a driving force behind much historical and cultural change The invention of the printing press initiated the Reformation The development of the compass ushered in the Age of Exploration and the discovery of the New World The cotton gin created the conditions that led to the Civil War Now in Beyond Engineering science writer Robert Pool turns the question around to examine how society shapes technology Drawing on such disparate fields as history economics risk analysis management science sociology and psychology Pool illuminates the complex often fascinating interplay between machines and society in a book that will revolutionize how we think about technology We tend to think that reason guides technological development that engineering expertise alone determines the final form an invention takes But if you look closely enough at the history of any invention says Pool you will find that factors unrelated to engineering seem to have an almost equal impact In his wide ranging volume he traces developments in nuclear energy automobiles light bulbs commercial electricity and personal computers to reveal that the ultimate shape of a technology often has as much to do with outside and unforeseen

forces For instance Pool explores the reasons why steam powered cars lost out to internal combustion engines He shows that the Stanley Steamer was in many ways superior to the Model T it set a land speed record in 1906 of more than 127 miles per hour it had no transmission and no transmission headaches and it was simpler one Stanley engine had only twenty two moving parts and quieter than a gas engine but the steamers were killed off by factors that had little or nothing to do with their engineering merits including the Stanley twins lack of business acumen and an outbreak of hoof and mouth disease Pool illuminates other aspects of technology as well He traces how seemingly minor decisions made early along the path of development can have profound consequences further down the road and perhaps most important he argues that with the increasing complexity of our technological advances from nuclear reactors to genetic engineering the number of things that can go wrong multiplies making it increasingly difficult to engineer risk out of the equation Citing such catastrophes as Bhopal Three Mile Island the Exxon Valdez the Challenger and Chernobyl he argues that is it time to rethink our approach to technology The days are gone when machines were solely a product of larger than life inventors and hard working engineers Increasingly technology will be a joint effort with its design shaped not only by engineers and executives but also psychologists political scientists management theorists risk specialists regulators and courts and the general public Whether discussing bovine growth hormone molten salt reactors or baboon to human transplants Beyond Engineering is an engaging look at modern technology and an illuminating account of how technology and the modern world shape each other
