

Key idea: Humans have a four-chambered heart, divided into left and right halves, acting as a double pump. The heart is the centre of the human cardiovascular system. It is a hollow, muscular organ made up of four chambers (two atria and two ventricles) that alternately fill and empty with blood, acting as a double pump. The left side (systemic

circuit) pumps blood to the body tissues and the right side (pulmonary circuit) pumps blood to the lungs. The heart lies between the lungs, to the left of the midline, and is surrounded by a double layered pericardium of connective tissue, which prevents over distension of the heart and anchors it within the central compartment of the thoracic cavity.

Human heart structure

(sectioned, anterior view)

The heart is not a symmetrical organ. Although the quantity of blood pumped by each side is the same, the walls of the left ventricle are thicker and more muscular than those of the right ventricle. The difference affects the shape of the ventricular cavities, so the right ventricle is twisted over to the left.

- | | |
|-----------|---|
| RA | Right atrium: receives deoxygenated blood via the anterior and posterior vena cava |
| RV | Right ventricle: pumps deoxygenated blood to the lungs via the pulmonary artery |
| LA | Left atrium: receives blood returning to the heart from the lungs via the pulmonary veins |
| LV | Left ventricle: pumps oxygenated blood to the head and body via the aorta |

Top view of a heart in section, showing valves

Anterior view of heart to show coronary arteries

Coronary arteries: The high oxygen demand of the heart muscle are met by a dense capillary network. Coronary arteries arise from the aorta and spread over the surface of the heart supplying the cardiac muscle with oxygenated blood. Deoxygenated blood is collected by cardiac veins and returned to the right atrium via a large coronary sinus.

1. In the schematic diagram of the heart below, label the four chambers, and the main vessels entering and leaving them. The arrows indicate the direction of blood flow. Use large colored circles to mark the position of each of the four valves.
