The Tangled Web of Price Variation Accounting Frank L. Clarke,2006 During the 1960s and 1970s a remarkable series of books was produced by academic staff in the field of accounting at the University of Sydney It was a period when academic research was largely analytical rather than empirically based For the most part the interests of academics at Sydney were largely directed at questioning the status quo either in the way accounting or auditing was practiced or in the conventional wisdom expressed in text books of the time The Sydney Accounting Classics series reflects the diversity of interests of the Sydney school at that time It also recognises the tremendous impact of the foundation professor of accounting R J Chambers This reprint series ensures that the ideas developed during this period remain available to new generations of scholars and researchers The Sydney Accounting Classics series is an initiative of the Accounting Foundation in association with Sydney University Press

*Mathematical Book Histories* Philip Beeley,Ciarán Mac an Bhaird,2024-08-12 This book both articulates and responds to increasing scholarly interest in the materiality of the book Taking as its base the unique collection of mathematical books in the Russell Library at Maynooth it addresses questions related to printing techniques and print culture book production provenance and reading practices It considers the histories

of individual items of the Russell Collection their previous locations and owners and explores ways in which annotations underlinings hand drawn diagrams and the like reveal patterns of reading and usage Finally it seeks to elicit more information on a previously under researched topic the historical role of mathematics in the extensive network of Irish colleges that once covered Catholic Europe located in places such as Salamanca Rome Douai and Prague Alongside delivering important new insights into print culture as a medium for transmitting scientific ideas Mathematical Book Histories is thus also intended to contribute to a broader understanding of the role and significance of mathematics in the context of clerical instruction and more broadly in the academic tradition of Ireland up to the beginning of the twentieth century Many of the volumes in the Russell Library reflect the remarkably rich book trade that flourished in seventeenth and early eighteenth century Dublin and which was quite distinct from that in London Booksellers often bought in their wares directly from abroad with the result that publications could enter collections that did not enter the purview of contemporary English or Scottish scholars in Britain
