

## Nature Vs Nurture Essay Example

Nature vs. Nurture is a topic that has been long debated by psychologist and everyday individuals alike. Twin studies have been used by scientists to provide enlightenment on environmental and hereditary influences on behavioral development. While certain elements in a child's upbringing and environment are bound to influence the way he or she will grow up to socialize, interact, and internalize this world we live in, researchers are interested in the relative importance of genetic predispositions.

Our social and antagonistic experiences help to shape our personality and mental development, but what about what has already been "wired" into our DNA? We can physically see that characteristics like height, weight, hair color, eye color, and other facial and body characteristics can be passed from parent to child. However, epigenetics research often questions if mental or behavioral characteristics such as personality traits, or mental abilities are also etched into our DNA.

Although inquisitiveness about the importance of both environment and heredity has existed for centuries, scientists are at the earliest stages of investigating which factor plays a bigger role. (Powledge 2011) Inconsistencies in the arguments between leading psychologists have led to the reformation of the "nature - nurture" theory. Since heredity and environment have been proven to both influence our future outcomes the only fair question that can be posed is "How Much" of a role does either side play in the mental and physical development of a child.

One of the most amazing things in science is the study of multiples. For decades, psychologists have tracked the growth, development and mental capabilities of twins, triplets, etc. Identical twins specifically, who originate from a single sperm and egg share the same genetic make-up, yet this does not mean that they are exactly alike. Environmental factors, as well as chemical changes within DNA influence the physical appearance and personality of twins as they age. Hypothetically, the separation of these monozygotic creatures would answer any question about which factor has more influence- nature or nurture.

But, since it is ethically impossible to separate identical twins and provide the EXACT same environmental factors, many questions have been left unanswered by the few known cases of intended separation. During the 1950s and 60's, a leading expert in psychiatry, Dr. Peter Neubauer, collaborated with a New York City adoption agency to conduct a research project on the nature vs. nurture debate known as the Minnesota Twin Studied. Five sets of identical twins and one set of triplets were all separated from their fellow sibling(s) during early infancy and studied intermittently through the course of their childhood.

Neubauer, along with a consultant to the agency, child psychologist Viola Bernard, believed that twins were a burden to parents and should be raised separately to improve their

with or if negative evidence also has an impact i.e. children's knowledge of language is based on explicit or implicit feedback to whether an utterance was in some way incorrect. The two terms will be defined and looked into in more detail in the second chapter. In the following the correlation between the nature vs nurture debate and language acquisition will be explained. First, the respective chapter provides a brief insight into how the nativist approach developed, mainly based on Chomsky's 1988 notion of Universal Grammar (UG) and the type of criticism it brought along. It further explains the connection between the respective theories and the grammatical aspect of language acquisition. In the last section, the main problems of experience-based language learning will be displayed and defined. The third chapter starts with a section dedicated to where the particular view that humans need innate structures for a correct knowledge of language stems from. It continues with a detailed look on the no negative evidence problem. The non-existence of negative evidence and which role it plays in terms of language acquisition will be explored from different standpoints by nativists as well as non-nativists. **The Journal of**

The purpose of the Journal is threefold: first, to stimulate the collection and facilitate the dissemination of facts about the education of Black people; second, to present discussions involving critical appraisals of the proposals and practices relating to the education of Black people; third, to stimulate and sponsor investigations of issues incident to the education of Black people. Sociology addresses the basic question of why people behave the way they do, but it does so utilizing perspectives distinctly different from those employed by other social or natural sciences. *Thinking Sociologically* 2<sup>e</sup> introduces elements of basic sociological perspectives both past and present. Rather than focusing on what sociologists currently think about various topics, it features many examples of how sociologists think. It guides readers in developing and using a sociological imagination so that they can apply critical thinking, appropriate theory, and a knowledge of methodology in finding answers to their own questions about human behavior. To help students bridge the gap between theory and research, this introductory text provides a modern interpretation of the nature of science and gives students the methodological tools with which to evaluate competing scientific claims. It introduces the network approach as a theoretical alternative to social disorganization theory, explains what constitutes a sociological problem, and describes how to transform a hypothesis into a research project that is feasible, interesting, and useful. Features exercises in critical yet open-minded assessment of claims to knowledge, invites the reader to join in some intriguing contemporary debates in the field of sociology, includes stimulating illustrative readings that reinforce students' analytical and logical thinking skills while sharpening their sociological imaginations. *Thinking Sociologically* 2<sup>e</sup> invites students to become active participants in sociology as an applied field, asking questions and seeking explanations for the behavior of real people in real situations in the real world.
