The Experience of Science I.F. Goldstein, M. Goldstein, 1984-04-30 Our earlier book How We Know An Exploration of the Scientific Process was written to give some conception of what the scientific approach is like how to recognize it how to distinguish it

from other approaches to understanding the world and to give some feeling for the intellectual excitement and aesthetic satisfactions of science. These goals represented our concept of the term scientific literacy. Though the book was written for the general reader to our surprise and gratification it was also used as a text in about forty colleges and some high schools for courses in science for the non scientist in methodology of science for social and behavioral sciences and in the philosophy of science. As a result we were encouraged to write a textbook with essentially the same purpose and basic approach but at a level appropriate to college students. We have drawn up problems for those chapters that would benefit from them described laboratory experiments that illustrate important points discussed in the text and made suggestions for additional readings term papers and other projects. Throughout the book we have introduced a number of chapters and appendices that provide examples of the uses of quantitative thinking in the sciences logic math ematics probability statistics and graphical representation.

Physical Anthropology Philip L. Stein, Bruce M. Rowe, 1989 Since the first edition of Physical Anthropology over a quarter century ago Stein and Rowe have been helping to teach physical anthropology to tens of thousands of students. In this new edition these award winning teachers and authors continue to share their love of discovery with students in this balanced objective introduction to physical anthropology that does not assume that students have any previous knowledge of the subject. Carefully streamlined making it more accessible and affordable this seventh edition provides students with a pedagogical program designed to facilitate comprehension. Every concept is carefully explained and illustrated guiding students step by step through difficult material. Despite changes in organization and length this text maintains its emphasis on three important themes. First that anthropology is a holistic discipline second that human beings are an integral part of nature and third because humans depend on learned behavior our maintenance of a balance with nature can be strengthened by an understanding of our evolutionary past. As always Stein and Rowe use the most current data to unravel the mystery of the evolution of humankind and to examine the dynamic relationship between humans and their environment.
