[The Evolution of Thought](#) Anne E. Russon, David R. Begun, 2007-07-23 Research on the evolution of higher intelligence rarely combines data from fields as diverse as paleontology and psychology. In this volume we seek to do just that, synthesizing the approaches of hominoid cognition, psychology, language studies, ecology, evolution, paleoecology and systematics toward an understanding of great ape intelligence. Leading scholars from all these fields have been asked to evaluate the manner in which each of their topics of research inform our understanding of the evolution of intelligence in great apes and humans. The ideas thus assembled represent a comprehensive survey of the various causes and consequences of cognitive evolution in great apes. *The Evolution of Thought* will therefore be an essential reference for graduate students and researchers in evolutionary psychology, paleoanthropology and primatology.

Folk Physics for Apes Daniel J. Povinelli,2000 From an early age humans know a surprising amount about basic physical principles such as gravity force mass and shape We can see this in the way that young children play and manipulate objects around them The same behavior has long been observed in primates chimpanzees have been shown to possess a remarkable ability to make and use simple tools But what does this tell us about their inner mental state do they therefore share the same understanding to that of a young child Do they understand the simple underlying physical principles involved Though some people would say that they do this book reports groundbreaking research that questions whether this really is the case Folk Physics for Apes challenges the assumptions so often made about apes It offers us a rare glimpse into the workings of another mind examining how apes perceive and understand the physical world an understanding that appears to be both similar to and yet profoundly different from our own The book will have broad appeal to evolutionary psychologists developmental psychologists and those interested in the sub disciplines of cognitive science philosophy anthropology The book additionally offers for developmental psychologists some valuable new non verbal techniques for assessing causal understanding in young children
