Scientific Inquiry Cycle: Review

Science helps researchers solve problems by applying knowledge and creating testing other "based with a test" which can be used to find or create improvements using evidence or ideas or improve solutions can have a positive impact. Understanding the problem fully, including its causes and effects, is the first step in finding an effective solution.

Designing solutions requires considering various constraints, such as budget, time, and safety concerns. Documenting the part of a solution might face challenges, especially, as it is important to weigh trade-offs carefully. For example, creating materials for a house that may affect its cost and ease of use, which influence the effectiveness of the solution.

After developing a solution, documenting how it works, what constraints affected it, and any compromises made help others learn and possibly improve on the idea. Communication, sharing knowledge openly, and reflecting on the impacts of the innovation are essential steps. This process involves how sharing knowledge locally encourages responsible decision-making and helps communities thrive.

6. Mark the best answer for each question.

1. What is the first important step when applying science to solve a local problem?
- Designing a solution immediately
 - Using the most expensive materials
 - Ignoring safety concerns
 - Understanding the problem fully

2. What does documenting constraints in a solution help with?
- Ignoring the problems of the project
 - Eliminating constraints like budget and safety
 - Showing how to avoid them
 - Demonstrating that the solution has no risks

3. Which is an example of a trade-off?
- Finding a solution without any tools
 - Ignoring safety concerns
 - Time taken to finish the project
 - Using unsafe materials

4. Why is it important to document a solution?
- To attract new users or investors
 - To make others aware
 - To record the process and justify it
 - To avoid documenting mistakes

12. Mark if the statement is True (T) or False (F).

When making a solution, it is important to consider the trade-offs between different factors. For example, a solution that is cheap but unsafe might be a bad idea. A solution that is expensive but safe might be a better idea. It is important to weigh the trade-offs carefully.

Answer for each question.

6. What factor should be considered when designing a test?

7. What should you do if improving one part of a solution causes problems elsewhere?

8. Which of these is a good problem that science can help solve?

9. How does documenting a solution help in the scientific process?

10. What should be done if a scientific solution is unsafe?
