

ANSWERS - AP Physics Multiple Choice Practice - Kinematics

<u>Solution</u>	<u>Answer</u>
1. Total distance = 60 miles, total time = 1.5 hours; average speed = total distance/total time	B
2. Area bounded by the curve is the displacement. By inspection of particle A, the positive area between 0 and 1s will be countered by an equal negative area between 1 and 2s.	B
3. Constant non-zero acceleration would be a straight line with a non-zero slope.	D
4. Area bounded by the curve is the displacement. By inspection of particle A, the positive area between 0 and 1s will be countered by an equal negative area between 1 and 2s.	A
5. Area bounded by the curve is the displacement. By inspection the negative area between 0 and 1s will be countered by an equal negative area sometime between 1 and 2s.	C
6. Between 0 and 1 s; $d_1 = vt$; from 1 to 11 seconds; $d_2 = v_0t + \frac{1}{2}at^2$; $d = d_1 + d_2$	C
7. Since the slope is positive and constant, so is the velocity, therefore the acceleration must be zero.	A
8. For a horizontal projectile, the initial speed does not affect the time in the air. Use $v_{0y} = 0$ with $10\text{ m} = \frac{1}{2}gt^2$	C
9. The time in the air for a horizontal projectile is dependent on the height and independent of the initial speed. Since the time in the air is the same at speed v and at speed $2v$, the distance ($d = vt$) will be twice as much at a speed of $2v$.	C
10. Average velocity = total displacement/total time; magnitude of total displacement = 500 m (3-4-5 triangle) and total time = 150 seconds	B
11. The acceleration is constant and negative which means the slope of the velocity-time graph must have a constant negative slope. (Only one choice has the correct acceleration anyway)	D
12. From rest, $h = \frac{1}{2}gt^2$	C
13. At the top of its path, the vertical component of the velocity is zero, which makes the speed at the top a minimum. With symmetry, the projectile has the same speed when at the same height, whether moving up or down.	D
14. g points down in projectile motion. Always.	B
15. For a horizontal projectile; $h = \frac{1}{2}gt^2$ (initial vertical component of velocity is zero)	E
16. At every point of a projectile's free-fall, the acceleration is the acceleration due to gravity	E
17. Average speed = total distance/total time = $(8\text{ m} - 2\text{ m})/(1\text{ second})$	D
18. For a horizontal projectile; $h = \frac{1}{2}gt^2$ (initial vertical component of velocity is zero)	C
19. The area under the curve is the displacement. There is more area under the curve for Car X.	A
20. Area under the curve is the displacement. Car Y is moving faster as they reach the same point.	B
21. Uniformly accelerated means the speed-time graph should be a straight line with non-zero slope. The corresponding distance-time graph should have an increasing slope (curve upward)	E
22. From the equation $d = \frac{1}{2}at^2$, displacement is proportional to time squared. Traveling from rest for twice the time gives 4 times the displacement (or 4 m). Since the object already travelled 1 m in the first second, during the time interval from 1 s to 2 s the object travelled the remaining 3 m.	C
23. To travel straight across the river, the upstream component of the boat's velocity must cancel the current. Since the speed of the current is the same as the speed of the boat, the boat must head directly upstream to cancel the current, which leaves no component across the river.	E
