Placement

Install the UPS in a protected area that is free of moisture and has adequate air flow. Do not operate the UPS where the temperature and humidity is outside the specified limits.

Warning: Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the warranty.

Installation

To install the UPS, please follow the installation instructions in the Owner's UPS Quick Reference Guide. This UPS is equipped with a terminal for the connection. See the APC Web site (www.apc.com) for available accessories.

Charge the Battery

The UPS charges its battery whenever it is connected to utility power. The battery will charge fully during the first 4 hours of normal operation. Do not unplug the UPS during the initial charge period.

Operating Instructions

Switch On — Switch Off

① With the UPS plugged in, power and connect the UPS to the utility source to supply power to the loads. The loads are automatically protected while the UPS performs a self-test.

② Press and hold the on/off button to turn off power to the loads. It may be necessary to use the UPS as a power source for the protected equipment.

Notes: Whenever the UPS is plugged in and utility voltage is present, the charger maintains battery charge.

 The on/off LCD illuminates when the UPS is supplying utility power to the loads.

Self-Test

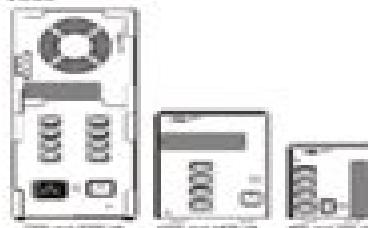

The UPS performs a self-test automatically when turned on, and every two weeks thereafter (by default). Autonomy will not exceed 10 minutes. This is implemented by disconnecting the load from the UPS.

During the self-test, the UPS briefly operates the loads on battery. If the UPS passes the self-test, it returns to on-line operation.

 If the UPS fails the self-test, it automatically returns to on-line operation and lights the replace battery LED.

The loads are not affected by a failed test. Replace the battery and perform the self-test again. If the replace battery LED is still on, replace the battery using the Replacing the Battery procedure.

④ LCD/LED/None Connection (Optional)

Power management software and interface kits can be used with the UPS. Use only kits supplied or approved by the manufacturer. Do not connect the interface cable to the UPS's computer interface port on the back panel of the UPS. Because the computer's drivers do not support the connection.

⑤ Computer Ground Leads to TVSS Connection (Optional)

The UPS features a TVSS connection for connecting the ground lead on transient voltage surge suppression (TVSS) devices such as telephone and network line protectors. The TVSS connection provides protection through the UPS's power cord ground conductor. To make a connection to the TVSS connection, locate the screw and connect the surge suppression device's ground lead. Tighten the screw to secure the lead.

⑥ Battery Pack Connection (2000 VA only)

Use the battery pack connector to connect the optional external battery pack.

⑦ On Battery

During on battery operation, the on battery LED illuminates and the UPS sounds an audible alarm consisting of three long beeps every 10 seconds. The alarm stops when the UPS returns to on-line operation.

Low Battery

When the UPS is operating on battery and the energy source of the battery fails, the UPS stops automatically until the UPS draws from other battery cell banks or returns to on-line operation.

⑧ 100% Battery Charge Bar Graph

The LCD display on the right of the front panel shows the present charge of the UPS's battery as a percentage of the battery's capacity. When all the LEDs light, the battery is fully charged. The top LED goes out whenever the battery is not 100% charged. When the LEDs are flicking, the battery is empty less than the 10% battery warning level for the load.

Shutdown Mode

If there is an utility power present, a load switch connected to the computer connection port can command the UPS to shut down. This is especially true to guarantee battery capacity after a controlled shutdown of the protected system. To shutdown mode, the UPS stops supplying power to the load, making the source of utility power.

The UPS sounds the front panel indicators sequentially in shutdown mode. If the UPS has shutdown due to a low battery, the UPS lights the Battery Charge Bar Graph only. When low power is restored, the UPS returns to on-line operation.

⑨ Replace Battery

If the Battery fails or self-tests, the UPS sounds short beeps for one

Voltage Sensitivity

The UPS detects low voltage fluctuations such as spikes, surges, dips, and noise, as well as discontinuities caused by operation with computers and general generators. By default, the UPS reacts to discontinuities by switching to on battery operation to protect the loads. When power quality is poor, the UPS may frequently transfer to on battery operation. If the loads can operate normally under such conditions, battery capacity and service life may be increased by reducing the sensitivity of the UPS.

 To reduce UPS sensitivity, press the configuration button on the rear panel. Use a pointed object such as a pen to press the button. Press it once to set the UPS's sensitivity to reduced. Press it again to set the sensitivity to low. Press the button a third time to set normal sensitivity.

⑩ Normal

 reduced: When the UPS is set to reduced sensitivity, the configuration LED is brightly lit. When it is set to reduced sensitivity, the LED is dimly lit. When it is set to low sensitivity, the LED is off.

Low Battery Warning Interval

By default, the low battery warning occurs when there are approximately two minutes of battery life remaining. This may not be enough time to gracefully shut down your protected computer system.

 To change the warning interval, press the rear panel configuration button while pressing and holding the front panel on/off button.

⑪ 2 min

 3 min: Press the configuration button once to set the low battery warning interval to approximately three minutes. Press it again to set the interval to approximately seven minutes. Press the button a third time to return the interval to two minutes.

⑫ Overload

When loads exceed the UPS's capacity, the overload LED illuminates, the UPS sounds a continuous beep, and the input current meter stops (the overload meter gauge of the control buttons page 10). The alarm ceases as load is reduced to normal. Disconnect non-critical load equipment from the UPS to eliminate the overload. If there is AC power and the current limit does not trip during overload, the loads are still powered. If the current limit trips and the UPS attempts to go on battery, the output AC will also stop.

⑬ Cold Start

When the UPS is off and there is no utility power, or it possible to cold start the UPS to power the loads from the UPS's battery.

Power: Cold start is not a normal condition.

 Press and hold the on/off button until the UPS begins beeping.

 Release the on/off button. During the beeping to start the UPS, utility voltage must be present.

The UPS has a diagnostic feature that displays the utility voltage. With the UPS plugged into the normal utility power, press and hold the on/off button to see the utility voltage (via digital display). After approximately five seconds the 7-LCD display on the right of the front panel shows the utility input voltage (either in the AC input section for the voltage reading).

 The display indicates that the voltage is between the displayed value from the left and the next higher value.

 For example, with the LCDs lit, the right voltage is between 230 and 247 VAC.

 When LCDs come on and the UPS is plugged into a working AC power outlet, the line voltage is extremely low. If all the LCDs come on, the line voltage is extremely high and should be checked by an electrician.
