- In the absence of air friction, an object dropped near the surface of the Earth experiences a constant acceleration of about 9.8 m/s^2 . This means that the
 (A) speed of the object increases 9.8 m/s during each second (B) speed of the object as it falls is 9.8 m/s
 (C) object falls 9.8 meters during each second (D) object falls 9.8 meters during the first second only
 (E) derivative of the distance with respect to time for the object equals 9.8 m/s^2
- A 500 -kilogram sports car accelerates uniformly from rest, reaching a speed of 30 meters per second in 6 seconds. During the 6 seconds, the car has traveled a distance of
 (A) 15 m (B) 30 m (C) 60 m (D) 90 m (E) 180 m
- At a particular instant, a stationary observer on the ground sees a package falling with speed v_1 at an angle to the vertical. To a pilot flying horizontally at constant speed relative to the ground, the package appears to be falling vertically with a speed v_2 at that instant. What is the speed of the pilot relative to the ground?
 (A) $v_1 + v_2$ (B) $v_1 - v_2$ (C) $v_2 - v_1$ (D) $\sqrt{v_1^2 - v_2^2}$ (E) $\sqrt{v_1^2 + v_2^2}$

- A ball initially moves horizontally with velocity v_1 as shown above. It is then struck by a stick. After leaving the stick, the ball moves vertically with a velocity v_2 , which is smaller in magnitude than v_1 . Which of the following vectors best represents the direction of the average force that the stick exerts on the ball?

- If F_1 is the magnitude of the force exerted by the Earth on a satellite in orbit about the Earth and F_2 is the magnitude of the force exerted by the satellite on the Earth, then which of the following is true?
 (A) F_1 is much greater than F_2 (B) F_1 is slightly greater than F_2
 (C) F_1 is equal to F_2 (D) F_2 is slightly greater than F_1 (E) F_2 is much greater than F_1
- A ball is thrown upward. At a height of 10 meters above the ground, the ball has a potential energy of 50 joules (with the potential energy equal to zero at ground level) and is moving upward with a kinetic energy of 50 joules. Air friction is negligible. The maximum height reached by the ball is most nearly
 (A) 10 m (B) 20 m (C) 30 m (D) 40 m (E) 50 m

Gender and Fair Assessment Warren W. Willingham, Nancy S. Cole, 2013-12-16 There have been many important changes in the participation of women and men in American society over the past quarter century Tests play a role in those changes by providing evidence of the diverse achievement and proficiency of women and men They aid the learning process and reflect inequalities in opportunity to learn and participate In addition they provide useful information in considering what alternatives in education and work make most sense for individuals and influence views about groups of students educational programs and a wide range of issues For all of these reasons it is important that tests assess fairly and reflect accurately the ways young people are and are not achieving as well as desired The test performance of women and men is a research topic of historical interest and has received much attention in recent years Because of this increased interest there is a great deal of new research and data available The purpose of the study presented in this volume was to review this new information with two objectives in mind to clarify patterns of gender difference and similarity in test performance and related achievements and to see what implications those findings might have for fair assessment and as a corollary examine the assessment process as a possible source of gender differences This study is interested in tests used in education to assess developed knowledge and skill In order to gain a broader view of gender similarity and difference the contributors looked at other types of measures and other characteristics of young women and men Their hope is to contribute to a firmer basis for insuring fairness in tests an objective which is particularly important as the field moves increasingly to new forms of assessment in which there is less experience *IIT Physics-I* , Examining the Examinations E.D. Britton, S.

Raizen, 2012-12-06 *Examining the Examinations* looks at the required advanced science and mathematics examinations taken by university bound students in seven countries This research focuses on topics covered types of questions used and performance expected from students The book concentrates on comparisons of the examinations illustrating their similarities and differences with selected questions taken from the actual examinations The international comparisons presented offer a window on educational laboratories in seven countries **Teaching Strategies for Distance Learning** , 1995

Volume 4 Operational Remote Viewing Government Memorandums and Reports includes an analysis of the applied remote viewing program and a selection of documents that provide a narrative on the behind the scenes activities of Star Gate In a total of 504 separate missions from 1972 to 1995 remote viewing produced actionable intelligence prompting 89 percent of the customers to return with additional missions The Star Gate data indicate that informational psi is a valid phenomenon These data have led to the development of a physics and neuroscience based testable model for the underlying mechanism which considers informational psi as a normal albeit atypical phenomenon The Star Gate data found insufficient evidence to support the causal psi psychokinesis hypothesis *Mathematical Reviews* ,1994 *American Journal of Physics* ,1999
