Evidence on Structural Instability in Macroeconomic Time Series Relations James H. Stock, Mark W. Watson, 1994 An experiment is performed to assess the prevalence of instability in univariate and bivariate macroeconomic time series relations and to ascertain whether various adaptive forecasting techniques successfully handle any such instability. Formal tests for instability and out of sample forecasts from sixteen different models are computed using a sample of 76 representative U.S. monthly postwar macroeconomic time series constituting 5700 bivariate forecasting relations. The tests indicate widespread instability in univariate and bivariate autoregressive models. However, adaptive forecasting models in particular time varying parameter models have limited success in exploiting this instability to improve upon fixed parameter or recursive autoregressive forecasts. **Asymptotically Median Unbiased Estimation of Coefficient Variance in a Time Varying Parameter Model** James H. Stock, Mark W. Watson, 1996 This paper considers the estimation of the variance of coefficients in time varying parameter models with stationary regressors. The maximum likelihood estimator has large point mass at zero. We therefore develop asymptotically median unbiased estimators and confidence intervals by inverting median functions of regression based parameter stability test statistics computed under the constant parameter null. These estimators have good asymptotic relative efficiencies for small to moderate amounts of parameter variability. We apply these results to an unobserved components model of trend growth in postwar U.S. GDP: the MLE implies that there has been no change in the trend rate while the upper range of the median unbiased point estimates imply that the annual trend growth rate has fallen by 0.7 percentage points over the postwar period. Econometrics by Example Damodar Gujarati, 2014-11-20 Damodar Gujarati is the author of bestselling econometrics textbooks used around the world. In his latest book, *Econometrics by Example*, Gujarati presents a unique learning by doing approach to the study of econometrics. Rather than relying on complex theoretical discussions and complicated mathematics, this book explains econometrics from a practical point of view, with each chapter anchored in one or two extended real life examples. The basic theory underlying each topic is covered and an appendix is included on the basic statistical concepts that underlie the material, making *Econometrics by Example* an ideally flexible and self-contained learning resource for students studying econometrics for the first time. The book includes a wide ranging collection of examples with data on mortgages
