This section explains how materials are classified as solids, liquids, or gases. It also describes the behavior of these three states of matter.

**Reading Strategy (page 68)**

**Comparing and Contrasting** As you read about the states of matter, replace each letter in the diagram below with one of these phrases: definite volume, definite shape, variable volume, or variable shape. For more information on this Reading Strategy, see the **Reading and Study Skills** in the **Skills and Reference Handbook** at the end of your textbook.

a. solids      b. liquids      c. gases
- Is the following sentence true or false? The fact that a copper wire can be bent shows that some solids do not have a definite shape.  
True
- Circle the letter of each phrase that describes how particles at the atomic level are arranged within most solids.  
a. randomly arranged      ☒ b. packed close together  
☒ c. arranged in a regular pattern      d. spread far apart
- Is the following sentence true or false? A liquid takes the shape of its container. True

dealt with The applications of this type of agitation system will become increasingly attractive from the standpoint of rationalization of stirred tank operations as well as environmental protection
