

**AP<sup>®</sup> BIOLOGY**  
**2010 SCORING GUIDELINES (Form B)**

**Question 4**

On a trip to a dense forest, a biologist noticed that millipedes (small invertebrates) were plentiful under logs but were rarely seen in any other location.

- (a) **Propose** THREE environmental variables (two abiotic and one biotic) that could explain why millipedes are found more frequently under logs. (1 point each; 3 points maximum)

The following list is not exhaustive.

<b>Abiotic factors</b> <b>2 points maximum</b>	<b>Biotic factors</b> <b>1 point maximum</b>
Light	Reproduction
Temperature	Predation
Water	Food supply
Soil Texture Nutrients pH	Competition
Wind	
Periodic disturbances — fire/storms/volcanoes	

Note: Nutrient can be abiotic or biotic depending on how it is used. Climate/weather/shelter are too general!

- (b) For ONE of the abiotic environmental variables you chose above, **design** a controlled experiment to test a hypothesis that this factor affects the distribution of millipedes on the forest floor. **Describe** data that would support your hypothesis. (1 point each; 6 points maximum)

Must relate to one of the two abiotic factors accepted in part (a) AND measure/relate to millipede distribution.

- **Hypothesis** — proposes a relationship between one abiotic factor and the distribution of millipedes.
- **Prediction/expected results** — states what should be observed if the hypothesis is supported. Can be in an “if ... then” format.
- **Design** — describes an experiment that manipulates one abiotic independent variable/factor.
- **Constants** — explicitly holds all other factors constant.
- **Control** — indicates a valid control group that serves as a comparison for experimental groups.
- **Data collection** — describes what observations will be collected or how they will be collected, or both.
- **Sample size** — indicates test of multiple millipedes or replicates.
- **Statistical analysis** — suggests a mathematical and/or statistical comparison of control and experimental groups or of observed and expected. A specific statistical test need not be mentioned.
- **Feasibility** — experiment could be performed and would yield data that would answer the question posed.
