

12.5a Place a socket on the tensioner bolt (A) and turn the tensioner clockwise (B) for belt removal

12.5b On V8 models with air conditioning, the inner belt tensioner is best accessed from below - use a 3/8-inch-drive tool in the tensioner's square hole (A) to rotate it (B) for belt removal

7. Route the new belt over the various pulleys, again rotating the tensioner to allow the belt to be installed, then release the belt tensioner.

Tensioner replacement

Refer to illustrations 12.5a and 12.5b

8. To replace a tensioner that has lost its spring tension, exhibits binding or has a worn-out pulley bearing, remove the mounting bolts (see illustrations).

9. Installation is the reverse of the removal procedure.

13 Underhood hose check and replacement (every 6000 miles or 6 months)

General

Caution: Replacement of air conditioning hoses must be left to a dealer service department or air conditioning shop that has the

equipment to depressurize the system safely and recover the refrigerant. Never remove air conditioning components or hoses until the system has been depressurized.

1. High temperatures in the engine compartment can cause the deterioration of the rubber and plastic hoses used for engine, accessory and emission systems operation. Periodic inspection should be made for cracks, loose clamps, material hardening and leaks. Information specific to the cooling system hoses can be found in Section 14.

2. Some, but not all, hoses are secured to their fittings with clamps. Where clamps are used, check to be sure they haven't lost their tension, allowing the hose to leak. If clamps aren't used, make sure the hose has not expanded and/or hardened where it slips over the fitting, allowing it to leak.

Vacuum hoses

3. It's quite common for vacuum hoses, especially those in the emissions system, to be color-coded or identified by colored stripes

molded into them. Various systems require hoses with different wall thickness, collapse resistance and temperature resistance. When replacing hoses, be sure the new ones are made of the same material.

4. Often the only effective way to check a hose is to remove it completely from the vehicle. If more than one hose is removed, be sure to label the hoses and fittings to ensure correct installation.

5. When checking vacuum hoses, be sure to include any plastic T-fittings in the check. Inspect the fittings for cracks and the hose where it fits over the fitting for distortion, which could cause leakage.

6. A small piece of vacuum hose (1/4-inch inside diameter) can be used as a stethoscope to detect vacuum leaks. Hold one end of the hose to your ear and probe around vacuum hoses and fittings, listening for the hissing sound characteristic of a vacuum leak. **Warning:** When probing with the vacuum hose stethoscope, be very careful not to come into contact with moving engine components such as the drivebelt, cooling fan, etc.
