Wellington, Bey-Hing Goh, 2020-03-27 There is a large market demand for new drugs The existing chronic or common ailments without cures development of new diseases with unknown causes and the widespread existence of antibiotic resistant pathogens have driven this field of research further by looking at all potential sources of natural products To date microbes have made a significant contribution to the health and well being of people globally The discoveries of useful metabolites produced by microbes have resulted in a significant proportion of pharmaceutical products in today's market Therefore the investigation and identification of bioactive compounds producing microbes is always of great interest to researchers Actinobacteria are one of the most important and efficient groups of natural metabolite producers Among the numerous genera Streptomyces have been recognized as prolific producers of useful natural compounds as they provide more than half of the naturally occurring antibiotics isolated to date and continue to emerge as the primary source of new bioactive compounds Certainly these potentials have attracted ample research interest and a wide range of biological activities have been subsequently screened by researchers with the utilization of different In vitro and In vivo model of experiments Literature evidence has shown that a significant number of interesting compounds produced by Actinobacteria were exhibiting either strong anticancer or neuroprotective activity The further in depth studies have then established the modulation of apoptotic pathway was involved in those observed bioactivities These findings indirectly prove the biopharmaceutical potential possessed by Actinobacteria and at the same time substantiate the

importance of diverse pharmaceutical evaluations on Actinobacteria In fact many novel compounds discovered from Actinobacteria with strong potential in clinical applications have been developed into new drugs by pharmaceutical companies Together with the advancement in science and technology it is predicted that there would be an expedition in discoveries of new bioactive compounds producing Actinobacteria from various sources including soil and marine sources In light of these current needs and great interest in the scope of this research this book seeks to contribute on the investigation of different biological active compounds producing actinobacteria which are exhibiting antimicrobial antioxidant neuroprotective anticancer activities and similar

Romalde,Sabela Balboa,Antonio Ventosa,2019-12-31 The great diversity of microbial life is the remaining major reservoir of unknown biological diversity on earth To understand this vast but largely unperceived diversity with its untapped genetic enzymatic and industrial potential microbial systematics is undergoing a revolutionary change in its approach to describe novel taxa based on genomic enviromic information The characterization of an organism is no longer bounded by methodological barriers and it is now possible to fully sequence the whole genome of a strain to study individual genes or to examine the genetic information by using different techniques In fact application of genomics is helping not only to provide a better understanding of the boundaries of genera and higher levels of classification but also to refine our definition of the species concept In addition increased understanding of phylogeny is allowing to predict the genetic potential of microorganisms for biotechnological applications and adaptation to environmental changes The present Research Topic on Microbial Taxonomy Phylogeny and Biodiversity compiles a collection of papers covering the use of genomic sequence data in microbial taxonomy and systematics including evolutionary relatedness of microorganisms application of comparative genomics in systematic studies or metagenomic approaches for biodiversity studies We hope that this eBook incentives and encourages researchers for future discussions on microbial taxonomy and phylogenetics
