Palomares, Rashid Sumaila, Charlotte De Fontaubert, 2024-11-26 Life Below Water LBW is in decline partly due to overfishing and partly because climate change is disrupting the biophysics of the ocean Fish is a central part of LBW where predator prey relationships keep the ocean alive An ocean full of life is an important source of food and livelihoods for humans worldwide LBW is now facing two ominous threats overfishing and climate change In this Research Topic we address how the reduction of overfishing can increase the ability of LBW to withstand the impacts of climate change Thus we encourage the submission of contributions that relate the fishing down marine food webs phenomenon i e the truncation of marine food webs by the extraction of high trophic level species the destruction of marine habitats e g through harmful fishing gears and the continued unsustainable extraction of these resources with climate related impacts on marine environments species populations and ecosystems We particularly encourage papers that discuss mitigation of climate change and the positive effect that this will have to make LBW resilient We would like to encourage an active discussion of future actions and policies to support this mitigation and provide the elements that might help in building a multidimensional and interactive framework to build LBW resilience

Goldfrank's Toxicologic Emergencies, Eleventh Edition Lewis S. Nelson, Robert S. Hoffman, Mary Ann Howland, Neal A.

Lewin, Lewis R. Goldfrank, 2018-08-22 Goldfrank's is the premier toxicology textbook that should be in every emergency department or poison center library. Whether you are a student, resident, or faculty, there is something here for you. If you are a toxicology fellow or poison specialist studying for your boards, this is your go-to book. I highly recommend this work. The Journal of Emergency Medicine: The best edition yet of the landmark text in medical toxicology. A Doody's Core Title for 2021. Covering every aspect of poison management, this indispensable case-based resource has been thoroughly refreshed to deliver evidence-based principles viewed through the lens of an active bedside clinical practice. In no other reference will you find such a diverse roster of esteemed editors and authors who deliver expert insights into every type of toxicologic emergency, whether due to substance abuse or exposure to toxins. Fully referenced and supported by a cohesive organization and full-color format, Goldfrank's begins with a historical perspective on medical toxicology principles and the general approach to the patient. It then progresses to the fundamental principles of medical toxicology encompassing biochemical and molecular concepts, the effect of xenobiotics on vital organs and body systems, and toxicologic principles in special populations. The Eleventh Edition of Goldfrank's Toxicologic Emergencies is the most rigorous volume to date, driven by a precise analysis of the latest medical literature and complex cases designed to facilitate differential diagnosis. New to this Edition: Additional cases and Special Considerations chapters designed to enhance clinical decision making and patient outcomes. New Antidotes in Depth provides timely critical information on toxicologic treatment strategies. New content on toxicogenomics explores its increasingly important role in predictive toxicology. Chapter-ending bulleted summaries of key points. Updated coverage of synthetics such as K2. Revised chapters on medical, clinical, and chemical toxicology include updated insights on poison emergencies, treatment strategies, and risk assessment tools. *Rosen's Emergency Medicine* John A.
