Teaching and Learning Secondary School Mathematics Ann Kajander, Jennifer Holm, Egan J Chernoff, 2018-10-24

This volume brings together recent research and commentary in secondary school mathematics from a breadth of contemporary Canadian and International researchers and educators. It is both representative of mathematics education generally as well as unique to the particular geography and culture of Canada. The chapters address topics of broad applicability such as technology in learning mathematics, recent interest in social justice contexts in the learning of mathematics as well as Indigenous education. The voices of classroom practitioners, the group ultimately responsible for implementing this new vision of mathematics teaching and learning, are not forgotten. Each section includes a chapter written by a classroom teacher, making this volume unique in its approach. We have much to learn from one another, and this volume takes the stance that the development of a united vision supported by both research and professional dialog provides the first step.

Math Advantage Grace M. Burton, 1999 *Effective Grading Practices for Secondary Teachers* Dave Nagel, 2015-03-04

Enact innovative grading systems that more accurately describe student progress. This book challenges traditional grading practices and provides alternatives that can have direct impact on student success. By making subtle shifts toward standards-based grading systems, schools can reduce unnecessary course failures, provide students and their families a more accurate picture of current progress, and increase opportunities for success. The author offers a range of grading reform strategies that are built from practical frameworks that are effective and simple to adapt. Among the many strengths of this book are: Practical application of existing research and evidence base for effective secondary grading reforms; A framework for schools and districts to apply and adapt failure prevention strategies such as early failure detection; Amnesty Days and meaningful stipulated second chance opportunities for students to reach mastery; Functional strategies and actions for shifting toward standards-based referenced grading without entirely abandoning letter grades; Countering resistance to change through a clearly articulated plan for conducting school-wide and classroom-level action research around the effectiveness of new or adjusted grading practices. Informative and pragmatic, this book is spot-on with analysis of this elephant in the room issue. Nagel uses both empathy and humor in getting to the heart of a process to generate real solutions while underscoring the ultimate need for teacher voice in any successful implementation. He provides ready-made strategies for real impactful change. I'm left hopeful that feedback will rule the day. Bruce Potter, Superintendent, Berkshire UFSD. Nagel offers an insightful and articulate voice to secondary improvement and alignment through grading practices. His tried and true methods through working with real districts provides a starting place and examples for others to follow. A must read for anyone serious about ensuring student engagement through meaningful feedback. Debra K. Howe, Superintendent, Tri Creek School Corporation.
