Stress and Environmental Regulation of Gene

Expression and Adaptation in Bacteria, 2 Volume Set Frans J. de Bruijn,2016-09-06 Bacteria in various habitats are subject to continuously changing environmental conditions such as nutrient deprivation heat and cold stress UV radiation oxidative stress dessication acid stress nitrosative stress cell envelope stress heavy metal exposure osmotic stress and others

In order to survive they have to respond to these conditions by adapting their physiology through sometimes drastic changes in gene expression. In addition, they may adapt by changing their morphology forming biofilms, fruiting bodies or spores, filaments, Viable But Not Culturable (VBNC) cells, or moving away from stress compounds via chemotaxis. Changes in gene expression constitute the main component of the bacterial response to stress and environmental changes and involve a myriad of different mechanisms including alternative sigma factors, bi- or tri-component regulatory systems, small non-coding RNA's, chaperones, CRISPR-Cas systems, DNA repair, toxin-antitoxin systems, the stringent response, efflux pumps, alarmones, and modulation of the cell envelope or membranes to name a few. Many regulatory elements are conserved in different bacteria; however, there are endless variations on the theme and novel elements of gene regulation in bacteria inhabiting particular environments are constantly being discovered. Especially in pathogenic bacteria colonizing the human body, a plethora of bacterial responses to innate stresses such as pH, reactive nitrogen and oxygen species, and antibiotic stress are being described. An attempt is made to not only cover model systems but give a broad overview of the stress responsive regulatory systems in a variety of bacteria including medically important bacteria where elucidation of certain aspects of these systems could lead to treatment strategies of the pathogens. Many of the regulatory systems being uncovered are specific but there is also considerable cross talk between different circuits. *Stress and Environmental Regulation of Gene Expression and Adaptation in Bacteria* is a comprehensive two-volume work bringing together both review and original research articles on key topics in stress and environmental control of gene expression in bacteria. Volume One contains key overview chapters as well as content on one- to three-component regulatory systems and stress responses, sigma factors, and stress responses, small non-coding RNAs, and stress responses, toxin-antitoxin systems, and stress responses, stringent response to stress responses to UV irradiation, SOS and double-stranded systems repair systems, and stress adaptation to both oxidative and osmotic stress and desiccation tolerance and drought stress. Volume Two covers heat shock responses, chaperonins, and stress cold shock responses, adaptation to acid stress, nitrosative stress, and envelope stress as well as iron homeostasis, metal resistance, quorum sensing, chemotaxis, and biofilm formation and viable but not culturable (VBNC) cells. Covering the full breadth of current stress and environmental control of gene expression studies and expanding it towards future advances in the field, these two volumes are a one-stop reference for non-medical molecular geneticists interested in gene regulation under stress.

Organic Chemistry Education: Research into Practice Jay Wackerly, Sarah Zingales, Michael Wentzel, Gautam Bhattacharyya, Brett McCollum, 2025-03-25

This Research Topic has three main goals:

1. Provide a platform for instructors of organic chemistry to showcase evidence-based methods and educational theories they have utilized in their classrooms.
2. Build new and strengthen existing connections between educational researchers and practitioners.

There are places in the literature dedicated for chemical education research (CER); however, there is not a clear avenue for those that have changed

their teaching methods based on published CER and report their experiences Creating this article collection will foster collaboration between chemical education researchers and teachers of organic chemistry This opportunity allows these instructors to share evidence based practices experiences challenges and innovative approaches from CER literature and beyond This Research Topic bridges discipline based education research and the scholarship of teaching and learning which will help advance organic chemistry education and improve student outcomes The Second Aizu International Symposium on Parallel Algorithms/Architecture Synthesis N.
