I.

Reactant	Initial Concentration
NO	0.0028 M
O ₂	0.0014 M

The oxidation of $\text{NO}_{(g)}$ producing $\text{NO}_{2(g)}$ is represented by the chemical equation shown above.

The initial concentrations of $\text{NO}_{(g)}$ and $\text{O}_{2(g)}$ are given in the table above. The changes in the concentration of $\text{NO}_{(g)}$ as a function of time are shown in the following graph.

Graph 1

Graph 2

Which graph best represents the changes in concentration of $\text{O}_{2(g)}$, and why?

- A. Graph 1, because the rate of O_2 consumption is half the rate at which NO is consumed; two molecules of NO react for each molecule of O_2 that reacts.
- B. Graph 1, because O_2 molecules are consumed at a slower rate at the beginning of the reaction when there are not as many molecules of NO_2 produced.
- C. Graph 2, because there is a large excess of O_2 molecules and its concentration will not change drastically over time.
- D. Graph 2, because a collision between three molecules to form a product has a low probability and the concentration of O_2 will remain relatively constant.

The Qualified Student Harold S. Wechsler,2017-09-29 In The Qualified Student Harold S Wechsler focuses on methods of student selection used by institutions of higher education in the United States More specifically he discusses the way that college and university reformers employed those methods to introduce higher education into a broader cross section of America by extending access to an increased number of students from nontraditional backgrounds Implicit in much of this book is an underlying social and ethical question How legitimate was and is higher education s regulation of social mobility Public concern over colleges and universities practices became inevitable once they became regulators between social classes The challenging of colleges admissions policies in the courts augments similar concerns that have been present in legislatures for

decades The volume is divided into three main sections Prerequisites Columbia and the Selective Function and Implications It focuses mainly on four universities The University of Michigan Columbia University the University of Chicago and the City University of New York Wechsler maintains that unlike other universities these institutions were pacesetters they did not adopt a new policy simply because some other college had already adopted it A new introduction brings the book originally published in 1977 up to date and demonstrates its continuing importance in today s academic world of selective admissions
