## Section II: Free-Response Questions 70 MINUTES

**DIRECTIONS:** You have 70 minutes to answer the TWO questions that follow. Your answer should present an argument rather than a list of facts. Make sure to incorporate psychological terminology into your answers whenever possible.

### Question 1: Article Analysis Question (AAQ)

Note that the text of the question below is adapted from the AP Psychology Course and Exam Description. Your response to the question should be provided in six parts: A, B, C, D, E, and F. Write the response to each part of the question in complete sentences. Use appropriate psychological terminology in your response.

Using the source provided, respond to all parts of the question.

A) Identify the research method used in the study.

**Scoring Criteria:** Accurately identifies the research method used in the study

**An example answer that earns 1 point:** The experimental method is used in this study.

B) State the operational definition of “masculine overcompensation” in this study.

**Scoring Criteria:** States a measurable or quantifiable definition of the identified variable as used in the study

**An example answer that earns 1 point:** The operational definition of “masculine overcompensation” is if the participants choose to play with traditional toys associated with masculinity (rather than playing with gender-neutral toys) for a longer time.

**Psychological Responses to Violations of Expectations: Perspectives and Answers from Diverse Fields of Psychology** Mario Gollwitzer, Anna Thorwart, Karin Meissner, 2018-03-19 From Pavlov s dog expecting food when hearing a bell to stereotypes as expectations about other people s behaviour from Bandura s self efficacy as expectation for success and failure of one s own behaviour to the predictive brain concept in current perception theories expectations have been a central construct in different areas of psychological research In each of these areas specific concepts theoretical approaches and empirical methods have been developed to explain when and why expectations persist and when they do not Many theories assume that expectations are likely to change in the face of disconfirming evidence However sometimes expectations persist even though they are empirically violated suggesting that they can be

sticky under certain circumstances But what are these circumstances And what are the psychological mechanisms that can explain why and when expectations persist or change after being confronted with expectation violating evidence Each contribution of the current book offers insights into individuals reactions to violations of expectations They show that many pieces of the puzzle have been collected in the many sub disciplines of psychology and that putting them together in an integrative fashion stays a fascinating enterprise

*Basic and applied research on deception and its detection* Wolfgang Ambach, Matthias Gamer, 2014-08-07 Deception is a ubiquitous phenomenon in social interactions and has attracted a significant amount of research during the last decades The majority of studies in this field focused on how deception modulates behavioral autonomic and brain responses and whether these changes can be used to validly identify lies Especially the latter question which historically gave rise to the development of psychophysiological lie detection techniques has been driving research on deception and its detection until today The detection of deception and concealed information in forensic examinations currently constitutes one of the most frequent applications of psychophysiological methods in the field With the increasing use of such methods the techniques for detecting deception have been controversially discussed in the scientific community It has been proposed to shift from the original idea of detecting deception per se to a more indirect approach that allows for determining whether a suspect has specific knowledge of crime related details This so called Concealed Information Test is strongly linked to basic psychological concepts concerning

memory attention orienting and response monitoring Although research in this field has intensified with the advancement of neuroimaging techniques such as PET and fMRI in the last decade basic questions on the psychological mechanisms underlying modulatory effects of deception and information concealment on behavioral autonomic and brain responses are still poorly understood This Research Topic brings together contributions from researchers in experimental psychology psychophysiology and neuroscience focusing on the understanding of the broad concept of deception including the detection of concealed information with respect to basic research questions as well as applied issues This Research Topic is mainly composed of original research articles but reviews and papers elaborating on novel methodological approaches have also been included Experimental methods include but are not limited to behavioral autonomic electroencephalographic or brain imaging techniques that allow for revealing relevant facets of deception on a multimodal level While this Research Topic primarily includes laboratory work relevant issues for the field use of such methods are also discussed

**New Directions in Assessing Historical Thinking** Kadriye Ercikan, Peter Seixas, 2015-02-20 New technologies have radically transformed our relationship to information in general and to little bits of information in particular The assessment of history learning which for a century has valued those little bits as the centerpiece of its practice now faces not only an unprecedented glut but a disconnect with what is valued in history education More complex processes historical thinking historical consciousness or historical sense making demand more complex assessments At the same time advances in scholarship on assessment open up new possibilities For this volume Kadriye Ercikan and Peter Seixas have assembled an international array of experts who have collectively moved the fields of history education and assessment forward Their various approaches negotiate the sometimes conflicting demands of theoretical sophistication empirically demonstrated validity and practical efficiency Key issues include articulating the cognitive goals of history education the relationship between content and procedural knowledge the impact of students language literacy on history assessments and methods of validation in both large scale and classroom assessments New Directions in Assessing Historical Thinking is a critical research oriented resource that will advance the conceptualization design and validation of the next generation of history assessments
