fascination with quasi Maoist values the factional politics through which he ascended the configuration of power of the Fifth Generation leadership and the country's likely future directions under the charismatic princeling. Despite an undistinguished career as a provincial administrator, Xi has rapidly amassed more power than his predecessors. He has overawed his rivals and shaken up the party state hierarchy by launching large scale anti corruption and rectification campaigns. With a strong power base in the People's Liberation Army and a vision of China as an awakening lion, Xi has been flexing China's military muscle in sovereignty rows with countries including Japan, Vietnam and the Philippines while trying to undermine the influence of the United States in the Asia Pacific region. While Xi is still fine tuning his art of governance, his zero tolerance for dissent and his preoccupation with upholding the privileges of the red aristocracy and the CCP's status as perennial ruling party do not bode well for economic, political or cultural reforms. Lam takes a close look at Xi's ideological and political profile and considers how his conservative outlook might shape what the new strongman calls the Great Renaissance of the Chinese race.

**Transparency in Assessment - Exploring the Influence of Explicit Assessment Criteria** Anders Jönsson, Frans Prins, 2019-04-03

In many schools and higher education institutions, it has become common practice to share assessment criteria with students. Sometimes it is required for accountability purposes, at other times criteria are used as a means to communicate expectations to students. However, the idea that explicit assessment criteria should be shared with students has been contested. On the one hand, research has shown that explicit criteria may positively affect student performance, reduce their anxiety as well as support students' use of self-regulated learning strategies. On the other hand, there are fears that explicit criteria may have a restraining influence on students' learning as well as limiting their autonomy and creativity. There are also indications of students becoming more performance oriented as opposed to learning oriented when being provided with explicit assessment criteria. Taken together, it is not fully understood under which circumstances it is productive for student learning to share explicit assessment criteria and under which circumstances it is not. In particular, empirical research on the proposed negative effects of sharing criteria with learners is limited and most fears voiced in the literature are based on individual experiences and anecdotal evidence. In this book, we therefore bring different perspectives on transparency in assessment together in order to further our understanding of how students are influenced by the use of explicit assessment criteria. A deeper understanding of the influence of explicit assessment criteria on students' understanding of criteria, motivation and learning is equally imperative for future research and educational practice, both of which need to go beyond individual opinions and convictions.
