Automated Driving and Driver Assistance Systems Tom Denton, 2019-10-16 Automated vehicles are set to transform the world Automated driving vehicles are here already and undergoing serious testing in several countries around the world This book explains the technologies in language that is easy to understand and accessible to all readers It covers the subject from several angles but in particular shows the links to existing ADAS technologies already in use in all modern vehicles There is a lot of hype in the media at the moment about autonomous or driverless cars and while some manufacturers expect to have vehicles available from 2020 they will not soon take over and it will be some time before they are commonplace However it is very important to be ready for the huge change of direction that automated driving will take This is the first book of its type available and complements Tom Denton's other books The Real Case for Driverless Mobility Alain L. Kornhauser, Michael L. Sena, 2024-01-24 The Real Case for Driverless Mobility Putting Driverless Vehicles to Use for Those Who Really Need a Ride explores solutions for providing mobility for the unserved underserved including those who cannot drive themselves afford transport alternatives or who live in areas where neither public nor private transport is offered The book synthesizes the career long activities of the authors and the Princeton SmartDrivingCars Summits and assesses whether cars without drivers can deliver an affordable and more effective alternative to mass transit and taxis A high percentage of the residents in many U S cities are poor and the jobs that remain are often not easily reached by public transit systems which struggle to

deliver a minimum level of service with their limited budgets The SDC Summits were initiated in 2017 by Alain Kornhauser to attempt to address this problem This book presents the problem and the proposed solution in a form that can be used by a wide audience and help build a constituency both for the proof of concept and for an eventual implementation in many cities and towns in North America and other parts of the world Professionals investors researchers and students alike will find this book a valuable exploration of how driverless technology can be applied to personal transport that can be used by a large sub group of the population who are not currently served by automobile transport and are poorly served by public transport solutions Takes a perspective from the demand side focused on the have nots and on assessing and designing the technology to start there and grow Looks at how to start small achieve success and evolve to scale with an emphasis on affordability Discusses automated vehicles from a multidisciplinary perspective with each chapter touching on a unique issue related to AVs
