Advances in Harmonic Analysis and Partial Differential Equations Donatella Danielli, Irina Mitrea, 2020-04-09 This volume contains the proceedings of the AMS Special Session on Harmonic Analysis and Partial Differential Equations held from April 21-22 2018 at Northeastern University Boston Massachusetts The book features a series of recent developments at the interface between harmonic analysis and partial differential equations and is aimed toward the theoretical and applied communities of researchers working in real complex and harmonic analysis partial differential equations and their applications The topics covered belong to the general areas of the theory of function spaces partial differential equations of elliptic parabolic and dissipative types geometric optics free boundary problems and ergodic theory and the emphasis is on a host of new concepts methods and results

Functional Analysis, Harmonic Analysis, and Image Processing Michael Cwikel, Mario Milman, 2017-07-26 This volume is dedicated to the memory of Björn Jawerth It contains original research contributions and surveys in several of the areas of mathematics to which Björn made important contributions Those areas include harmonic analysis image processing and functional analysis which are of course interrelated in many significant and productive ways Among the contributors are some of the world's leading experts in these areas With its combination of research papers and surveys this book may become an important reference and research tool This book should be of interest to advanced graduate students and professional researchers in the areas of functional analysis harmonic analysis image processing and approximation theory It combines articles presenting new research with insightful surveys written by foremost experts

From the Basic Homotopy Lemma to the Classification of C*-algebras Huaxin Lin, 2017-08-11 This book examines some recent developments in the theory of algebras which are algebras of operators on Hilbert spaces An elementary introduction to the technical part of the theory is given via a basic homotopy lemma concerning a pair of almost commuting unitaries The book presents an outline of the background as well as some recent results of the classification of simple amenable algebras otherwise known as the Elliott program This includes some stable uniqueness theorems and a revisiting of Bott maps via stable homotopy Furthermore theory related rotation maps are introduced The book is based on lecture notes from the CBMS lecture sequence at the University of Wyoming in the summer of 2015

Analysis, Complex Geometry, and Mathematical Physics Paul M. N. Feehan, Jian Song, Ben Weinkove, Richard A. Wentworth, 2015-07-21 This volume contains the proceedings of the Conference on Analysis Complex Geometry and Mathematical Physics In Honor of Duong H Phong which was held from May 7-11 2013 at Columbia University New York The conference featured thirty speakers who spoke on a range of topics reflecting the breadth and depth of the research interests of Duong H Phong on the occasion of his sixtieth birthday A common thread familiar from Phong's own work was the focus on the interplay between the deep tools of analysis and the rich structures of geometry and physics Papers included in this volume cover topics such as the complex Monge Ampère equation pluripotential theory geometric partial differential

equations theories of integral operators integrable systems and perturbative superstring theory **The Mathematics of Shuffling Cards** Persi Diaconis, Jason Fulman, 2023-03-20 This book gives a lively development of the mathematics needed to answer the question How many times should a deck of cards be shuffled to mix it up The shuffles studied are the usual ones that real people use riffle overhand and smooshing cards around on the table The mathematics ranges from probability Markov chains to combinatorics symmetric function theory to algebra Hopf algebras There are applications to magic tricks and gambling along with a careful comparison of the mathematics to the results of real people shuffling real cards The book explores links between shuffling and higher mathematics Lie theory algebraic topology the geometry of hyperplane arrangements stochastic calculus number theory and more It offers a useful springboard for seeing how probability theory is applied and leads to many corners of advanced mathematics The book can serve as a text for an upper division course in mathematics statistics or computer science departments and will be appreciated by graduate students and researchers in mathematics statistics and computer science as well as magicians and people with a strong background in mathematics who are interested in games that use playing cards **Advances in Optimization and Applications** Nicholas Olenov, Yuri Evtushenko, Milojica Jaćimović, Michael Khachay, Vlasta Malkova, Igor Pospelov, 2023-01-01 This book constitutes the refereed proceedings of the 13th International Conference on Advances in Optimization and Applications OPTIMA 2022 held in Petrovac Montenegro during September 26–30 2022 The 13 full papers included in this book were carefully reviewed and selected from 26 submissions They were organized in topical sections as follows mathematical programming global optimization discrete and combinatorial optimization optimization and data analysis game theory and mathematical economics and applications

Attractors Under Autonomous and Non-autonomous Perturbations Matheus C. Bortolan, Alexandre N. Carvalho, José A. Langa, 2020-05-29 This book provides a comprehensive study of how attractors behave under perturbations for both autonomous and non autonomous problems Furthermore the forward asymptotics of non autonomous dynamical systems is presented here for the first time in a unified manner When modelling real world phenomena imprecisions are unavoidable On the other hand it is paramount that mathematical models reflect the modelled phenomenon in spite of unimportant neglectable influences discounted by simplifications small errors introduced by empirical laws or measurements among others The authors deal with this issue by investigating the permanence of dynamical structures and continuity properties of the attractor This is done in both the autonomous time independent and non autonomous time dependent framework in four distinct levels of approximation the upper semicontinuity lower semicontinuity topological structural stability and geometrical structural stability This book is aimed at graduate students and researchers interested in dissipative dynamical systems and stability theory and requires only a basic background in metric spaces functional analysis and for the applications techniques of ordinary and partial differential equations
