

...the same region as the type of a Y-shaped antibody's "arms" recognize antigens. Figure 24.9 in the text shows one of the T helper (TH) and cytotoxic (TC) T cells, the former of which is an antigen-specific T cell. These two T cells are a member of the T cell family, which is involved in the activation of antigens and pathogens. These processes have been introduced in the diagram that follows. Identify each process, and label the diagrams accordingly. Choose from phagocytosis, precipitation of dissolved antigens, neutralization, cell lysis, activation of complement, and agglutination of antibodies.

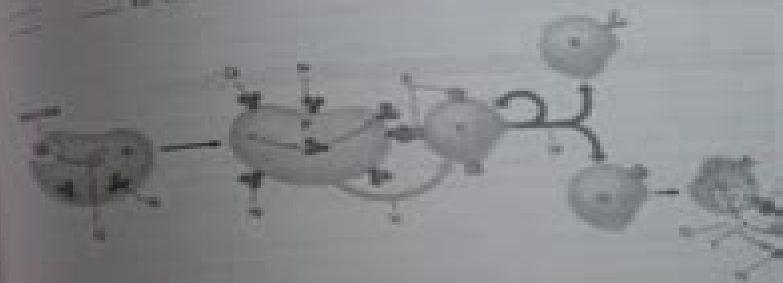

Exercise 7 (Module 24.10)

The usefulness of monoclonal antibodies stems from their ability to recognize and attach to specific molecules, which otherwise might be difficult to single out. See if you can think of several areas not mentioned in the text where this ability might be useful, and write your ideas on a separate piece of paper. Try not to limit your speculations to medicine. For example, how might monoclonal antibodies be useful in criminology, wildlife conservation, or archaeology?

...the same right corner of this diagram has been referred to by a number of T cells in response to the self-activated immune response that stems with each infection. This task of the following components with no role in the self-activated immune response (1-12), and then find each component on the diagram (1-12).
