Oceans are vast bodies of water that cover more than 70% of Earth and have different zones based on depth and light.

The top layer is called the sunlight zone. This layer gets sunlight and is home to plants and animals like dolphins and sharks.

Below that is the twilight zone. This layer is a bit darker but still with some light. This is where creatures like lantern fish live.

The midnight zone is deeper. This is entirely dark and cold, but the anglerfish lives here.

The deepest zone is deeper and colder. There is no light. No plants live here to produce oxygen. This is home to tough but amazing creatures like giant tube worms and deep sea squid.

The hadal zone takes names as the trench as it is the deepest and is on the seafloor. This zone was named after Hadley, the first jet of the underwater. With harsh conditions, there are the deepest spots on Earth, but some cool species can survive here.
