## Question/ Purpose

Can plants survive off of other liquids besides water?

## Research

Plants need water to survive. Water is the most important part of a plant's diet. Water is used for photosynthesis, which is the process of turning sunlight into energy. Water is also used for transportation of nutrients and oxygen throughout the plant. Water is also used for cooling the plant down. If a plant does not have enough water, it will wilt and eventually die. This is because the plant is not able to get the energy it needs to survive.
