How genes are not the only basis of heredity and what this means for evolution human life and disease For much of the twentieth century it was assumed that genes alone mediate the transmission of biological information across generations and provide the raw material for natural selection In *Extended Heredity* leading evolutionary biologists Russell Bonduriansky and Troy Day challenge this premise Drawing on the latest research they demonstrate that what happens during our lifetimes and even our grandparents and great grandparents lifetimes can influence the features of our descendants On the basis of these discoveries Bonduriansky and Day develop an extended concept of heredity that upends ideas about how traits can and cannot be transmitted across generations By examining the history of the gene centered view in modern biology and reassessing fundamental tenets of evolutionary theory Bonduriansky and Day show that nongenetic inheritance involving epigenetic environmental behavioral and cultural factors could play an important role in evolution The discovery of nongenetic inheritance therefore has major implications for key questions in evolutionary biology as well as human health *Extended Heredity* reappraises long held ideas and opens the door to a new understanding of inheritance and evolution

Inheritance Sharon Moalem,2014-04-10 A groundbreaking book that will transform how we understand ourselves and our families by revealing that everything we thought we knew about genetics is wrong Your experiences no matter how seemingly inconsequential from bullies to crushes to what you eat for dinner have all left an indelible mark within you And more importantly within your genes *Inheritance* is a guidebook for change No longer do we have to settle for what we've been given We can write our own story We're taught that we don't have much of a choice in the matter of what we get or what we give because our genetic legacy was fixed when our parents conceived us But that's all wrong Our genes are constantly on the move some are turning on while others are turning off all in response to what you're doing what you're seeing and what you're feeling And all of those things can be changed which means we can change Genetically **AP**
