

AP Biology Genetics Problems

Monohybrid Crosses (One-trait)

1. *Sample Problem:* The gene for tall is dominant over dwarf in the garden pea plant used by Mendel. A pea plant that comes from a line of plants that are all tall is crossed with a dwarf pea plant. What is the phenotype of the F1 generation? What is (are) its genotype(s)?
2. If the offspring generation of problem 1 is crossed with the tall plant from a tall lineage, what will be the phenotype(s) and in what ratios for the offspring? What will be the genotype(s) and in what ratios?
3. If the F1 generation of problem 1 is crossed with the dwarf parent from a dwarf lineage, what will be the genotypes and the ratios of the offspring, and the phenotypes and ratios of the offspring?
4. The genes for dark eyes (black and brown) usually dominate over genes for blue or gray eyes. A man with black eyes marries a woman with light gray eyes. They have two children, a boy with black eyes, and a girl with blue eyes. What are the genotypes of the man, his wife, the little boy, and the little girl?
5. A man with brown eyes marries a woman with blue eyes. They have 12 brown-eyed children. What are the genotypes of the man, his wife and all the children?
6. A brown-eyed man marries a blue-eyed woman. They have four children, two with brown eyes, and two with blue eyes. What are the genotypes of all these people?
7. A brown-eyed man with a blue-eyed mother marries a brown-eyed woman with a blue-eyed father. What is the probability that their first child will be brown-eyed? That the second child will be brown-eyed?
8. A man and a woman have 24 children. Of the children, 17 have brown eyes and 7 of the children have blue eyes. What are the genotypes of the parents?
9. Assume that the dimple is inherited as a simple dominant gene. A dimpled man whose mother has no dimple marries a woman with no dimple. What is the probability that they will have a child with a dimple?
10. Sickle cell anemia (SCA) is a human genetic disorder caused by a recessive allele. A couple plans to marry and wants to know the probability that they will have an affected child. With your knowledge of Mendelian inheritance, what can you tell them if (a) both are normal, but each has one affected parent and the other parent has no family history of SCA; and (b) the man is affected by the disorder, but the woman has no family history of SCA?

The Genesis of Syntactic Complexity

T. Givón, 2009-02-04 Complex hierarchic syntax is a hallmark of human language The highest level of syntactic complexity recursive embedded clauses has been singled out by some for a special status as the evolutionary apex of the uniquely human language faculty evolutionary yet mysteriously immune to Darwinian adaptive selection Prof Givón's book treats syntactic complexity as an integral part of the evolutionary rise of human communication The book first describes grammar as an adaptive instrument of communication assembled upon the pre existing platform of pre linguistic object and event cognition and mental representation It then surveys the two grand developmental trends of human language diachrony the communal enterprise directly responsible for fashioning synchronic morpho syntax and cross language diversity and ontogeny the individual endeavor directly responsible for acquiring the competent use of grammar The genesis of syntactic complexity along these two developmental trends is compared with second language acquisition pre grammatical pidgin and pre human communication The evolutionary relevance of language diachrony language ontogeny and pidginization is argued for on general bio evolutionary grounds It is the organism's adaptive on line behavior invention learning and skill acquisition

that is the common thread running through all three developmental trends The neuro cognitive circuits that underlie language and their evolutionary underpinnings are described and assessed Recursive embedding turns out to be not an adaptive target on its own but the by product of two distinct adaptive moves i the recruitment of conjoined clauses as modal operators on or referential specifiers of other clauses and ii the subsequent condensation of paratactic into syntactic structures
