Software Engineering for Robotics Ana Cavalcanti, Brijesh Dongol, Rob Hierons, Jon Timmis, Jim Woodcock, 2021-07-05 The topics covered in this book range from modeling and programming languages and environments via approaches for design and verification to issues of ethics and regulation. In terms of techniques there are results on model based engineering, product lines, mission specification, component based development, simulation, testing and proof. Applications range from manufacturing to service robots to autonomous vehicles and even robots that evolve in the real world. A final chapter summarizes issues on ethics and regulation based on discussions from a panel of experts. The origin of this book is a two day event entitled RoboSoft that took place in November 2019 in London. Organized with the generous support of the Royal Academy of Engineering and the University of York UK. RoboSoft brought together more than 100 scientists, engineers and practitioners from all over the world representing 70 international institutions. The intended readership includes researchers and practitioners with all levels of experience interested in working in the area of robotics and software engineering more generally. The chapters are all self-contained, include explanations of the core concepts and finish with a discussion of directions for further work. Chapters include: Towards Autonomous Robot Evolution, Composition, Separation of Roles and Model-Driven Approaches as Enabler of a Robotics Software Ecosystem and Verifiable Autonomy and Responsible Robotics. Available open access under a Creative Commons Attribution 4.0 International License via link springer.com/Robotics. S.G. Tzafestas, 2012-12-06. Robotics is a modern interdisciplinary field that has emerged from the marriage of computerized numerical control and remote manipulation. Today's robotic systems have intelligence features and are able to perform dexterous and intelligent human-like actions through appropriate combination of learning, perception, planning, decision making and control. This book presents advanced concepts, techniques and applications reflecting the experience of a wide group of specialists in the field. Topics include kinematics, dynamics, path planning and tracking, control, mobile robotics, navigation, robot programming and sophisticated applications in the manufacturing, medical and other areas.
