Nanoengineering Michael Berger, 2019-11-21 While our five senses are doing a reasonably good job at representing the world around us on a macro scale we have no existing intuitive representation of the nanoworld ruled by laws entirely foreign to our experience This is where molecules mingle to create proteins where you wouldn't recognize water as a liquid and where minute morphological changes would reveal how much solid things such as the ground or houses are constantly vibrating and moving Following in the footsteps of Nano Society and Nanotechnology The Future is Tiny this title introduces a new collection of stories demonstrating recent research in the field of nanotechnology This drives home the fact that a plethora of nanotechnology R&D will become an integral part of improved and entirely novel materials products and applications yet will remain entirely invisible to the user

The book gives a personal perspective on how nanotechnologies are created and developed and will appeal to anyone who has an interest in the research and future of nanotechnology. **Reviews of Nanotechnology The Future is Tiny** The book is recommended not only to all interested scientists but also to students who are looking for a quick and clear introduction to various research areas of nanotechnology. *Angew Chem* 2017 56 26 7351 7351 Once you start reading you will find it very difficult to stop. *Chromatographia* 2017 80 1821

Educational Technology Beyond Content

Brad Hokanson, Gregory Clinton, Andrew A. Tawfik, Amy Grincewicz, Matthew Schmidt, 2020-04-09 This book is the outcome of a research symposium sponsored by the Association for Educational Communications and Technology (AECT). Consisting of twenty four chapters including an introduction and conclusion, it argues that informational content should not be the main element of education and that to provide more for learners it is necessary to go beyond content and address other skills and capabilities. It also discusses the false premise that learning is complete when the information is known, not when learners seek more their own directions, answers and ideas. The authors assert that the ability to synthesize, solve problems and generate ideas is not based on specific content, although education often focuses solely on teaching content. Further, they state that content can be separated from the learning process and that instructional design and educational technology must be about the skills, habits and beliefs to be learned.
