Ziebarth, 2012-07-10 This book explores the impact of curriculum materials on school mathematics and the ways teachers adapt them in practice. It introduces research tools for analyzing how curriculum is enacted in classrooms offering insights for researchers, educators, and curriculum developers seeking to improve instruction and student engagement

**The National Curriculum Outdoors: Year 6** Sue Waite, Deborah Lambert, Michelle Roberts, 2020-06-25 Part of the National Curriculum Outdoors series aimed at improving outside the classroom learning for children from Year 1 to Year 6. Teaching outside the classroom improves pupils' engagement with learning as well as their health and wellbeing but how can teachers link curriculum objectives effectively with enjoyable and motivating outdoor learning in Year 6? The National Curriculum Outdoors Year 6 presents a series of photocopiable lesson plans that address each primary curriculum subject whilst enriching pupils with the benefits of learning in the natural environment. Outdoor learning experts Sue Waite, Michelle Roberts, and Deborah Lambert provide inspiration for primary teachers to use outdoor contexts as part of their everyday teaching and showcase how headteachers can embed curriculum teaching outside throughout the school whilst protecting teaching time and maintaining high quality teaching and performance standards. *Teaching to the Math Common Core State Standards* F. D. Rivera, 2014-02-05 This is a methods book for elementary majors and preservice beginning elementary teachers. It takes a very practical approach to learning to teach elementary school mathematics in an emerging Age of the Common Core State Standards. The Common Core State Standards in Mathematics (CCSSM) is not meant to be the official mathematics curriculum; it was purposefully developed primarily to provide clear learning expectations of mathematics content that are appropriate at every grade level and to help prepare all students to be ready for college and the workplace. A quick glance at the Table of Contents in this book indicates a serious engagement with the recommended mathematics underlying the kindergarten through grade 5 portions of the CCSSM first with issues in content, practice, assessment, learning, teaching, and classroom management pursued next and in that order. In this book we explore what it means to teach to the CCSSM within an alignment mindset involving content, practice, learning, teaching, and assessment. The CCSSM content standards which pertain to mathematical knowledge, skills, and applications have been carefully crafted so that they are teachable, learnable, coherent, fewer, clearer, and higher. The practice standards which refer to institutionally valued mathematical actions, processes, and

habits have been conceptualized in ways that will hopefully encourage all elementary students to engage with the content standards more deeply than merely acquiring mathematical knowledge by rote and imitation. Thus in the CCSSM proficiency in content alone is not sufficient and so does practice without content which is limited. Content and practice are both equally important and thus must come together in teaching learning and assessment in order to support authentic mathematical understanding. This blended multisourced text is a getting smart book. It helps elementary majors and preservice beginning elementary teachers work within the realities of accountable pedagogy and develop a proactive disposition that is capable of supporting all elementary students in order for them to experience growth in mathematical understanding necessary for middle school and beyond including future careers. *The Complete Sourcebook on Children's Software* Children's Software Review, 2001-03 5000 critical reviews of CDs, videogames, smart toys for ages 1 to 16. Women in STEM Education Lisbet Rønningbakk, Karen Blackmore, 2023-12-05. We are delighted to present the inaugural Women in Education series of article collections. At present less than 30% of researchers worldwide are women. Long standing biases and gender stereotypes are discouraging girls and women away from science related fields and from pursuing a career in academia and in different professional environments especially when linked to STEM fields. Science and gender equality are however essential to ensure sustainable development in all disciplines. In order to change traditional mindsets gender equality must be promoted. Stereotypes defeated and girls and women should be encouraged to pursue academic careers. Therefore Frontiers in Education is proud to offer this platform to promote the work of women scientists, educators and professionals across all fields of STEM Education. Female representation still needs to be improved in key roles in the field and the way in which an equitable education contributes to fairer and less biased academic and professional environments worldwide should be more investigated. The work presented here highlights the diversity of research performed across the entire breadth of STEM Education research and presents advances in theory, experiment and methodology with applications to compelling problems.
