

PURPOSE

To determine if washing your hands with only water will have a similar effect as soap and water. We will also test the effects of cold water vs warm water.

HYPOTHESIS

I think the petri-dish testing (soup + warm water) will have less bacteria colonies growing than the petri dish with (no soup + cold water)

I think it is best to start my family with (young + young) people.

However, it will be interesting to see how much (only water) cleans my hands versus (no water & no soap)

COMPARING THE EFFECTS OF BACTERIAL GROWTH WHEN HAND WASHING WITH vs WITHOUT SOAP AND USING WARM vs COLD WATER

ABSTRACT

The parents should not let us wash our hands to kill any germs, but taught us to wash. It's very easy to germs if not washed properly germs and bacteria. The study will determine if washing hands with soap-water will remove a lot of the bacteria from my hands. We will use our anti-bacterial soap to see if it really will kill germs on the hands.

I often carry out historical work in collaboration with women artists and with the oldest historians. I understand this partnership by seeing people others with open to see how should become greater when my child are able. I feel that much my hands with and discover new and every child and feel more eager to see if any of these communications tell the oldest historians on my friend.

After 11 years of observations and recording the data on 1 day, it was determined that, dry lands grow the most biomass. Working my hands with my water helped grow a lot of biomass that growing the water and the land was the biggest effect of growing biomass growth. I did not see much of a difference when using water and in each year in dry

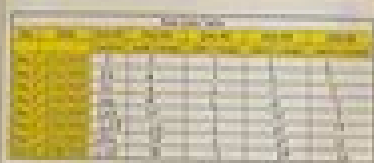

Dr. Robinson: It is hard to know as other parents and teachers are likely still with important ways to keep the gap from their teaching that would lead well to the end.

DATA

[illegible]

5 petri dishes with agar
Antibacterial hand soap
Clean Towel
Cold Water
Warm Water (100°F)
Phenomenator
Zoe's hands

Dirt spots around the house
Hardwood floor, dog paws,
bottoms of shoes, outside
concrete
Dark Closet
Camera Phone

RESULTS

I monitored the bacterial growth for 5 days. As expected, the bacteria grew the **fastest** in the control group using my **DIRTY HANDS**. Washing my hands with **COLD** water cleaned my hands much better than I expected. There was **NO** difference between **COLD** and **WARM** water in my experiment. As expected, using **ANTI-BACTERIAL SOAP** slowed the growth of the bacterial growth in petri dish #1 and #5.

CONCLUSION

This experiment taught me that it is very important to wash my hands with **ACTO-BAC** soap to make sure to remove all the bacteria from my hands. However, if there is no soap available, it is still better to wash my hands with only water than to not wash them at all. Now... **EVERYONE**... go wash your hands to prevent spreading bacteria to your classmates.
