

MULTIPLICATION PROBLEMS 3.1B

Have a go at solving these multiplication problems.

Can you spot the 'trick' problem which is not a multiplication problem?

1) A pack of pens contains 6 pens. How many pens in 5 packs?

2) How many wheels on 7 cars?

3) A paperclip is made from 10cm of wire. How much wire would I need for 6 paperclips?

4) Sally runs for 3 miles a day. How far will she run in a week?

5) I buy 5 apples on Monday, and 7 more on Tuesday. How many have I bought in total?

6) A multipack bag of crisps holds 6 packets. How many packs of crisps in 6 multipacks?

7) It takes a rocket 7 seconds to travel a mile. How long would it take the rocket to go 5 miles at that speed?

Did you spot the trick problem?

Lesson Study Research and Practice in Mathematics Education Lynn C. Hart, Alice S. Alston, Aki Murata, 2011-01-11

Lesson study is a professional development process that teachers engage in to systematically examine their practice with the goal of becoming more effective. Originating in Japan, lesson study has gained significant momentum in the mathematics education community in recent years. As a process for professional development, lesson study became highly visible when it was proposed as a means of supporting the common practice of promoting better teaching by disseminating documents like standards, benchmarks, and nationally validated curricula. While the body of knowledge about lesson study is growing, it remains somewhat elusive and composed of discrete research endeavors. As a new research area, there is no coherent knowledge base yet. This book will contribute to the field, bringing the work of researchers and practitioners together to create a resource for extant work. This book describes several aspects of Lesson Study, amongst others, it gives an historical overview of the concept, it addresses issues related to learning and teaching mathematics, it looks at the role of the teacher in the process. The last two sections of the book look at how lesson Study can be used with preservice mathematics teachers and at university mathematics methods teaching.

Accelerating K-8 Math Instruction Nicki Newton, 2023

Schools have been using various approaches to address the struggles that students are having with mathematics learning that have been compounded by the pandemic. There is an overwhelming consensus by both educators and researchers that we need to adapt acceleration rather than remediation as a tool to counteract the challenges that students currently face. Acceleration is about equity, which allows all our students to access an engaging standards-based, academically rigorous grade level curriculum. In this book, educational consultant Dr. Nicki Newton shows K-8 teachers how to accelerate mathematics instruction so that all students learn and work on grade level receive the right scaffolding when they need it and feel a sense of achievement and success. Educators will, in turn, experience lower frustration and the joy of helping students thrive. Taking a deep dive into school acceleration, chapters address research, planning, assessment, pedagogy, teaching, math vocabulary, lesson planning, goal setting, and motivation and action planning. Readers will learn how to use acceleration to get everybody motivated to learn and to create pathways of achievement. Book Features: Unpacks accelerating instruction as a way of saying everybody is invited to this party. Looks at how acceleration provides a pathway to helping academically challenged students achieve and move in step with their grade level standards. Offers detailed ways to plan, implement, and evaluate accelerated math lessons in grades K-8. Provides numerous tools, templates, and strategies so readers can use ideas right away.

Leading PLCs at Work® Districtwide

Robert Eaker, Mike Hagadone, Janel Keating, Meagan Rhoades, 2021-01-25

Ensure your school district is doing the right work the right way for the right reasons. With this resource as your guide, you will learn how to align the work of every PLC team districtwide from the boardroom to the classroom. Each chapter focuses on one of four types of teams and provides practices and tools for working together to foster a districtwide culture of continuous improvement. Use this

resource to align your district's work in a top down bottom up cyclical process. Learn the leadership role the district office plays in supporting successful PLC at Work implementation and school improvement efforts. Observe how collaborative teams at every level align their work districtwide to ensure high levels of learning in professional learning communities. Study real life examples and artifacts of best practices in action. Receive protocols and templates such as the Team Analysis of Common Assessment TACA form to move student learning forward. Review a process for establishing a guaranteed and viable curriculum and discover strategies for analyzing student learning and making data informed decisions.

Reflective Teaching

Kenneth M. Zeichner, Daniel P. Liston, 2013-05-13. This volume outlines the assumptions and beliefs that distinguish the concept of the reflective teacher from the view of the teacher as passive and a mere technician a view that teacher education programs and schools have historically promoted. The authors demonstrate how various conceptions of reflective teaching differ from one another. They believe that it is only through teachers' reflections on their own teaching that they become more skilled, more capable and in general better teachers. This is the first volume in the Reflective Teaching and the Social Conditions of Schooling series. The major goal of both this book and of all of the volumes to follow in this series is to help teachers explore and define their own positions with regard to the topics and issues at hand within the context of the aims of education in a democratic society.

Improving Thinking in the Classroom Keith J. Topping, 2023-12-05. Programs like philosophy for children, reciprocal teaching, problem based learning and computerized games can help students' critical and creative thinking skills but which are most effective. This research to practice book showcases how you can improve the thinking cognition of your students across the curriculum and beyond. Each chapter focuses on a particular program, describes the method and background research, offers examples and explains key processes in implementation. You'll learn about thinking programs within a subject across the curriculum, outside the curriculum and those which can be either within or outside the curriculum so you can choose a program which suits your context. You'll also find out what to consider when evaluating a thinking skills program. And finally you'll discover shared features of the methods such as peer interaction, discourse, argumentation, scaffolding and transfer so you can see the commonalities of the programs and think about designing your own approaches. Whether you're a classroom teacher, department head or other key stakeholder this powerful resource will help you determine what really works for teaching thinking so your students can apply such skills and thrive long after they've left school. Note: This book is part of a set a companion book focuses on programs for teaching metacognition or thinking about thinking.

concepts to actual classroom teaching practices. Many methods books assume that their readers know very little about learning theory and proceed to either overwhelm their readers or trivialize the material through a superficial chapter. Sharp and Hoiberg integrate learning theory throughout their text and show how learning theory can be viewed through mathematics in real classrooms without becoming tedious or distracting. Chris Ohana, Western Washington University Field Editor for the NSTA Journal of Science and Children College students planning to be elementary school teachers need a framework and examples that reflect contemporary notions about the teaching and learning of mathematics. Similarly, college methods professors need materials that challenge their students with respect to the mathematical content they are expected to teach and how they can encourage children's mathematical thinking. The needs of both may be met with Learning and Teaching K-8 Mathematics, Tom Romberg, University of Wisconsin, Madison. Perhaps one of the most important aspects of the text is the continual reference to the classroom, seeing it not only in form of vignettes but hearing it from the voice of a practicing teacher and also the inclusion of excerpts of questioning techniques used by other practicing teachers. This constant reference to the classroom will help preservice teachers become much more reflective mathematics teachers.
