4263b Lcr Meter User Manual:

Non-Invasive Monitoring of Transdermal Drug Delivery Pasquale Arpaia, Umberto Cesaro, Nicola Moccaldi, Isabella Sannino, 2022-03-23 The book presents an innovative technology based on injection of a very weak current to trace the quantity of a drug carried immediately after the administration. The book makes the reader familiar with the technology from the conception through the design of the instrument up to the preliminary clinical applications. In the first chapter the method of transdermal drug delivery and the use of impedance spectroscopy in the dermatological field are presented. The second chapter describes a screening measurement campaign aimed at proving the feasibility of the assessment method and identifying the bandwidth of interest. The prototyping validation and characterization of an instrument to measure the amount of drug delivered DUSM Drug Under Skin Meter are presented in chapter three. In the fourth chapter three experimental campaigns based on the electrical analysis of the biological tissue behavior due to the drug delivery are reported: i laboratory emulation on eggplants ii ex vivo tests on pig ears and finally iii in vivo tests on human volunteers. In the fifth chapter a behavioral model based on Finite Elements and Partial Differential Equation of an impedance based measurement system for assessing the drug released under the skin during transdermal delivering is proposed. The last chapter is dedicated to present a campaign in order to prove the suitability for insulin therapy applications. This book is intended for biomedical engineers, biomedical engineering students, operators working in the field of biomedical instrumentation, biotechnologists and technicians of transdermal vehiculation.
