

## Main System

1. Main Air Jet
2. Jet Needle
3. Carburetor Bore
4. Main Air Passage

5. Throttle Valve
6. Needle Jet
7. Bleed Pipe
8. Main Jet

## Main System Fuel and Air Supply

The bleed pipe has holes to admit the air metered by the main air jet. This air mixes with the fuel in the needle jet to prepare the fuel for better atomization in the carburetor bore.

The lower part of the jet needle is tapered and extends down into the needle jet. It is fixed to the throttle valve, and thus rises up in the needle jet as the throttle valve rises. At  $\frac{1}{2}$  throttle opening, the tapered portion of the needle starts coming up out of the jet, which increases needle-to-jet clearance and thereby increases the amount of fuel that can pass up through the jet.

The amount of fuel drawn out of the needle jet is also influenced, particularly at lower speeds, by the amount of cutaway on the throttle valve. The amount of this cutaway, which is on the intake side of the throttle valve, helps define the size of the air passage directly above both the pilot outlets and needle jet outlet.

## Cutaway

At near full throttle openings, the cross-sectional area of the needle to jet clearance becomes greater than the cross-sectional area of the main jet. At these openings, the fuel drawn up into the carburetor bore is limited by the size of the main jet rather than the needle to jet clearance.

Trouble in the main system is usually indicated by poor running, or lack of power at high speeds. A dirty or clogged main jet will cause the mixture to become too lean. An overly rich mixture could be caused by clogging of the air jet, its air passage, or the air holes in the bleed pipe; by needle jet or needle wear (increasing clearance); by a loose main jet; or by a loose bleed pipe.

## Cleaning (See caution on Pg. 151)

Disassemble the carburetor and wash the main jet, bleed pipe, needle jet, jet needle, air jet, and air passage with a high flash-point solvent, blowing them clean with compressed air. If necessary, use a bath of automotive type carburetor cleaner. A worn needle jet or jet needle should be replaced.

**NOTE:** The last number of the jet needle number ("3" of SCL10-3) is not stamped on the needle, but is the number of the groove in which the clip must be installed. The groove numbers are counted from the topmost groove, 5 being the lowest groove.

**CAUTION** If the clip is put in any but the specified groove, exhaust emission will be increased, and the engine may suffer serious damage which could result in a crash.
