Numerical and experimental investigations of distribution of gaseous emissions with the air flow in the indoor environment Umer Afzal,2017 There are many sources of emissions produced by burning fuel for power or heat through chemical reactions and from leaks from industrial processes or equipment There is always a possibility of a potential hazard when these gases enter into the indoor environment with the air flow The determination of the concentration profiles are necessary to evaluate the potential hazard posed by the gas spread The main objectives of this work are to develop an appropriate measurement methodology and a 3D CFD transient multicomponent simulation model for the determination of spatial and temporal distribution of gaseous emissions with the air flow in the indoor environment This work is also aimed at comparing the numerical simulation results of different CFD programs for a 2D base case model of indoor air flow with and without emission source under laminar and turbulent flow conditions for the purpose of developing a better basic understanding of the physical phenomena and for the selection of the suitable and appropriate CFD program for the further development of the simulation model One of the goals is also to apply the developed simulation model to the loss prevention and risk mitigation in the indoor environment and to study the influence of different parameters on the concentration distribution of gaseous pollutants in the presence of air flow in the indoor environment to minimize the expensive and time consuming experimentation efforts **ANSYS Command Reference Guide** Swanson Analysis Systems,1987 *The Maritime Engineering Reference Book* Anthony F. Molland,2011-10-13 The Maritime Engineering Reference Book is a one stop source for engineers involved in marine engineering and naval architecture In this essential reference Anthony F Molland has brought together the work of a number of the world s leading writers in the field to create an inclusive volume for a wide audience of marine engineers naval architects and those involved in marine operations insurance and other related fields Coverage ranges from the basics to more advanced topics in ship design construction and operation All the key areas are covered including ship flotation and stability ship structures propulsion seakeeping and maneuvering The marine environment and maritime safety are explored as well as new technologies such as computer aided ship design and remotely operated vehicles ROVs Facts figures and data from world leading experts makes this an invaluable ready reference for those involved in the field of maritime engineering Professor A F Molland BSc MSc PhD CEng FRINA is Emeritus Professor of Ship Design at the University of Southampton UK He has lectured ship design and operation for many years He has carried out extensive research and published widely on ship design and various aspects of ship hydrodynamics A comprehensive overview from best selling authors including Bryan Barrass Rawson and Tupper and David Eyres Covers basic and advanced
