Method Statement For Steel Frame:

Management of Construction Projects Brian Cooke, 2014-11-17 Construction Management is a wide ranging discipline but ultimately it is a demanding hands on discipline concerned with the management of people plant and materials all mobilised to complete a building project safely on time on budget and to the client's satisfaction. *Management of Construction Projects* is a highly illustrated series of case studies based on seven live construction management projects demonstrating the very practical nature of managing projects. The detailed case studies cover a variety of construction projects varying in value from 1 million to 117 million including a major inner city office block a portal framed factory unit a university refurbishment project a superstore car park and a new school building. The case studies emphasise detailed on site management procedures and identify a predominantly functional approach to managing projects. A number of related chapters covering practical and theoretical aspects of construction management support and illustrate the individual case studies. With a strong emphasis on the practical nature of the subject *Management of Construction Projects* is an ideal introduction to the subject for all students on construction and related degree and diploma programmes. It will be of particular interest to students preparing for the CIOB EPA programme and the new NVQ courses at level 4 and 5 in construction management
