Prior Knowledge Questions (Do these BEFORE using the Ogame.)

(Note: The purpose of these questions is to activate prior knowledge and get students thinking. Students are not expected to know the answers to the Prior Knowledge Questions.)

1. Why do we need to eat food?

Answers will vary. Sample answer: Food provides a source of energy and raw materials for growth and development.

2. How do you think our bodies break food down into useful nutrients?

Answers will vary. Sample answer: Teeth chew food into small pieces, which are swallowed and transported to the stomach. Chemicals in the stomach and intestines further break down food into simple nutrients, which are absorbed into blood.

Ogame: What are...

The **Digestive System** is a group of organs that does three things:

- First, the digestive system breaks food down into useful nutrients, a process called **digestion**.
- Next, the nutrients move into the bloodstream, a process called **absorption**.
- Finally, the leftover waste is removed from the body, a process called **elimination**.

bioavailability:
Chemical substances that are not absorbed into the blood may be used by the body.

Within the **Digestive System Ogame™**, you can arrange the organs of the digestive system any way you like. To begin, look at the organs on the **Large Ogame** tab. Place your cursor over each organ to learn more about it.

1. Which organs allow nutrients to be absorbed? **Small intestine and large intestine**
2. Which organ stores and compacts waste before it is eliminated? **Colon**
3. Which two organs help to break food down mechanically? **Mouth, stomach**
