Skwirzynski, 1981-10-31 *Nuclear Science Abstracts*, 1976 NSA is a comprehensive collection of international nuclear science and technology literature for the period 1948 through 1976 pre dating the prestigious INIS database which began in 1970 NSA existed as a printed product Volumes 1-33 initially created by DOE's predecessor the U.S. Atomic Energy Commission AEC NSA includes citations to scientific and technical reports from the AEC the U.S. Energy Research and Development Administration and its contractors plus other agencies and international organizations universities and industrial and research organizations References to books conference proceedings papers patents dissertations engineering drawings and journal articles from worldwide sources are also included Abstracts and full text are provided if available *The Innovators* Walter Isaacson, 2014 Chronicles the lives and careers of the men and women responsible for the creation of the digital age including Doug Englebart Robert Noyce Bill Gates Steve Jobs and more

**4D Visualization of Matter** Ahmed H Zewail, 2014-09-12 Ever since the beginning of mankind's efforts to pursue scientific inquiry into the laws of nature visualization of the very distant and the very small has been paramount The examples are numerous A century ago the atom appeared mysterious a raisin or plum pie of no structure until it was visualized on the appropriate length and time scales Similarly with telescopic observations a central dogma of the cosmos was changed and complexity yielded to simplicity of the heliocentric structure and motion in our solar system For matter in over a century of developments major advances have been made to explore the inner microscopic structures and dynamics These advances have benefited many fields of endeavor but visualization was incomplete it was limited either to the 3D spatial structure or to the 1D temporal evolution However in systems with myriads of atoms 4D spatiotemporal visualization is essential for dissecting their complexity The biological world is rich with examples and many molecular diseases cannot be fully understood without such direct visualization as for example in the case of Alzheimer's and Parkinson's The same is true for phenomena in materials science chemistry and nanoscience This anthology is an account of the collected works that have emerged over the past decade from Caltech Through recent publications the volume provides overviews of the principles the electron based techniques and the applications made Thanks to advances in imaging principles and technology it is now possible with 4D electron microscopy to reach ten orders of magnitude improvement in time resolution while simultaneously conserving the atomic spatial resolution in visualization This is certainly a long way from Robert Hooke's microscopy which was recorded in his 1665 masterpiece *Micrographia* **El-Hi Textbooks and Serials in Print**, 1986 *Soviet Physics, Solid State*, 1992 **Physics Essays**, 1998 *Boston Studies in the Philosophy of Science*, 1996 **General physics, relativity, astronomy and mathematical physics and methods**, 1974 *Quantum Mechanics and Objectivity* Patrick A. Heelan, 2012-12-06 Quantum mechanics has raised in an acute form three problems which go to the heart of man's relationship with nature through experimental science or the public objectivity of science that is its value as a universal

science for all investigators 2 the empirical objectivity of scientific objects that is man's ability to construct a precise or causal spatio-temporal model of microscopic systems and finally 3 the formal objectivity of science that is its value as an expression of what nature is independently of its being an object of human knowledge These are three aspects of what is generally called the crisis of objectivity or the crisis of realism in modern physics This crisis is studied in the light of Werner Heisenberg's work Heisenberg was one of the architects of quantum mechanics and we have chosen his writings as the principal source material for this study Among physicists of the microscopic domain no one except perhaps Bohr has expressed himself so abundantly and so profoundly on the philosophy of science as Heisenberg His writings both technical and non-technical show an awareness of the mysterious element in scientific knowledge far from the facile positivism of Bohr and others of his contemporaries The mystery of human knowledge and human Subjectivity is for him an abiding source of wonder

Modern Luminescence from Fundamental Concepts to Materials and Applications, Volume 1 Surender Kumar Sharma, Carlos Jacinto da Silva, Daniel Jaque Garcia, Navadeep Shrivastava, 2022-11-23 Modern Luminescence From Fundamental Concepts to Materials and Applications Volume One Concepts and Luminescence is a multivolume work that reviews the fundamental principles properties and applications of luminescent materials Topics addressed include key concepts of luminescence with a focus on important characterization techniques to understand a wide category of luminescent materials The most relevant luminescent materials such as transition metals rare earth materials actinide based materials and organic materials are discussed along with emerging applications of luminescent materials in biomedicine solid state devices and the development of hybrid materials This book is an important introduction to the underlying scientific concepts needed to understand luminescence such as atomic and molecular physics and chemistry Other topics explored cover the latest advances in materials characterization methods such as Raman spectroscopy ultrafast spectroscopy nonlinear spectroscopy and more Finally there is a focus on the materials physics of nanophotonics Includes an overview of the underlying scientific concepts of luminescence such as quantum theory physics and historical context Provides the most important materials characterization methods including Raman spectroscopy nonlinear spectroscopy and more for a wide range of luminescent materials Introduces nanophotonics dynamics that are important to keep in mind when designing materials and devices
