Pflaum,2004-02-15 During the technology boom of the 1980s and 1990s computers seemed set to revolutionize education Do any of these promises sound familiar Technology would help all students learn better thanks to multimedia programs capable of adapting to individual needs learning styles and skill levels Technology would transform the teacher s role from a purveyor of a one size fits all curriculum to a facilitator of student exploration Technology would replace static textbooks with dynamic interactive learning resources that were always up to date Technology would boost test scores as engaged and motivated students acquired advanced skills problem solving abilities and a growing thirst for knowledge By 2001 educational materials developer William D Pflaum had begun to suspect that technology was not the all purpose solution it had seemed He decided to see how computers were really being used in U S classrooms and embarked on a yearlong road trip to a cross section of elementary middle and high schools throughout the nation In this book he recounts his journey Although he did find technology application to admire too often he found broken promises millions spent for little measurable gain problems instead of solutions a fix instead of a fix This inside look at computer use in our schools shares the voices experiences triumphs and frustrations of educators and students in urban rural and suburban settings The author provides insight into the key roles that computers currently play in the classroom and clarifies what we must do ensure that the promise of technology is fulfilled and that students truly benefit Note This product listing is for the reflowable ePub version of the book
